10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: The council need to be completely overhauled. Archaic, Nazi like behavioural structure surrounding over paid, arrogant staff, misused funds and bullying tactics towards those that pay their salaries. Vile Council with no genuine foresight or genuine use of funds. Could not be less in favour of any proposed fund spending until the structure and mentality of Council brings itself to be of the standard that deserves to be governing Auckland and its people.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: See above. What qualifies the council to spend any money when its systems are broken, stale and its leadership is weak and out dated.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: See above responses for misuse of Auckland rates, arrogance of council members and a lack of integrity, diverse thinking or actual deliverance of much function or efficiency of spending or funding with Auckland rates, registrations, rubbish and ridiculous rules and regulations over private building, land and business approval and consent processes.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: As above. Council are not qualified for making these decisions until they are restructured and retrained in actual real public service not bureaucracy.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Needs to be done

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: WHY is there a covid created deficit? Because ratepayers are also impacted economically. A rates increase is the last thing we need no matter where it's spent. Perhaps take some of it from the overblown salaries of your employees. No government worker, no matter how qualified, should earn more than the Prime Minister. Perhaps Auckland Council should seek budgeting advice from WINS.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: Why should residents who don't use public transport pay for it? Bus rates are already outrageous.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

The destruction of native trees for the purpose of development by private investors is hideous. Council approved the cutting of native trees in Avondale while residents physically demonstrated their objection for over 250 days. You now propose rate increases to support the environment and address tree planting??? How about you don't cut the ones we have (some hundreds of years old) and keep our rates as they are. You can charge more for developers .

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: I am also impacted by Covid and have not worked for six months. Why would you think that ratepayers have the funds for any increase. Also there are so many more dwellings being built surely you have factored in this extra revenue. How about pushing projects out a year or two instead of bring them forward. Have some empathy for the ratepayers who are also impacted by Covid.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: Why should rate payers who never use buses contribute to them? Fix the transport links and pricing and you'll reduce emissions by incentivising Aucklanders to leave their cars at home. Also there is still investigation going on about lifecycle of electric batteries and impact on environment.

Trees, there is Kaipatiki project ect, why create an "Auckland Council" one to grow seedlings, waste of money, use what we already have.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Why am I being asked to pay for water improvements in my rates when I am paying this in my water rates to Watercare? Maybe Watercare needs to be merged back into Auckland Council and save on a heap of overhead costs, this could cover the funds you are wanting.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: How about looking at replacing one building which houses multiple services. Why are the libraries stand alone buildings, to me it makes sense that they also house the community centres, etc. Make them proper community hubs, I've seen Highbury and Swanson libraries go up at what cost? Make them all multi-faceted.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Library late fees, when is a book deemed late or lost? Late fees ensure books are returned in timely manner.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: I will leave that decision for the local residents

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why How are you trying to get Maori more involved as I've not seen anything relating to this.

I have never felt unsafe in the local community so surprised this is a Henderson issue.

Basically not supporting any priorities as there is nothing of substance.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Stop all the townhouses going up on a single section between single housing without thought to infrastructure.

Also, stop the urban sprawl. High rise buildings having such small dwellings. The sizes need to be able to accomodate normal sized families so that people have more options for where they can live comfortably.

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Don't know

Tell us why: Need to focus more on the key role of council. Transport, water, sewerage.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: Need to get current spending under control and infra structure properly in place before planting trees.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Better to maintain what you have rather than leasing from the private sector.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Do not support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: If there are enough users to support this service then it should be user pays.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: Generally support but ensure that there is adequate parking for all new developments (some dangerous parking on bearms and streets occuring so that motorists cannot see pedestrians, especiall children). Also need more free prk and rides as we do not all live on transport routes

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: Need light rail and extension of rail network including reinstating some train stops that were removed. Need more parking around Henderson station...no bus from Piha!

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Reinstate wetlands; harsher fines for polluters (especially farmers); all sewage should be treated.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Important to keep facilities and upgrade. They bring people into town e.g the library & swimming baths. Bring the community together and provide opportunities for various members of our community to share their talents and skills (music in the parks etc). They are the glue for communities and a place for people to meet & interact

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Not sure how the city centre will develop over the course of time it maybe that towns will become the new hubs, also only go in once a year as so difficult to park and get in (no bus service from Henderson Valley or Piha etc.)

The Upper Harbour Local Board are proposing a new bus service between Paremoro and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: Has to be fair. If all areas of New Zealand work on the same principal the fine! How will you charge 'others' that will use the service surely they should pay their fair whack. It is a commercial route so residents should not be charged extra, happy for the council to subsidise the route through general rates.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Fishing re water quality. Over fishing is causing a degradation of our aquatic environments (produce over 70% of our oxygen). With such a small population do we really need factory ships and should we be feeding the world (excess profiteering) at the expense of our environment. Bottom trawling should be banned. Fishing companies need more monitoring- do we really need Russian fishermen, doesn't New Zealand have any or...is it the pay and conditions and the lack of interest in our environment that make them such good employers. Reduce quota's. All based on limited stock so still more than the environment can support

What is your opinion on this proposal? Other

Tell us why: I would rather that the Zita Maria park be looked at for upgrades. It only has a rugby field which does have proper water draining during winter and a small kids playground. There is a lot of space here and I would recommend building a bigger kids park, volley ball court as there is none around the west area at all, bike track for kids around the fields similar to that at Beauchamp park.

Also I would recommend a upgrade to facilites and look of Henderson. Its seems to be getting alot of apartments and buildings and a improvement to the town center would be required.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Spend our money more wisely, and don't waste it, if the council were a business, everyone would have been fired for such wastage. Hire competent people rather than monkeys and even if you had to pay them more the output would be well worth it. So much wastage shouldn't be the ratepayers problems. Nothing is being done about this wastage and incompetence and we the ratepayers just have to keep paying more but for less service!!!

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: Replace older buses with electric at the end of their lifespan, don't go out and replace just for the sake of it, ratepayers can't afford to pay for the "nice to have's"

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: The extension is fine as our water quality needs to be improved but don't keep tacking on more and more increases of rates!!! Use the current rates more wisely - trim the fat!

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Fantastic! A solution to the problem that isn't charging ratepayers more! More of this thinking is needed!!!

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Don't just charge landowners, charge all people fairly, everyone uses public facilities and services.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: You are assuming that just those people will use that service, in reality others will too, and most of those residents won't. If you need to charge the bus passengers more than a usual fare to run these buses then that is a better way to do it

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why The priorities are bizarre, the ratepayers need better infrastructure, and things done in shorter time frames so we're not inconvenienced for years on end. They should be looking at road widening, putting electricity cables underground, improving council services, upgrades to public transport so it goes where people need it and on time and at regular short intervals. Why is there no ferry service from te atatu peninsula and te atatu South? Why is that less important than some watersports? There's no train line for that part of the West either. At least West Harbour and hobsonville have a ferry, but then they're in a different local board area....

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Infrastructure. Put electricity cables underground, get better public transport (as per my previous answers), upgrades the water and wastewater network, make it easy for developers to develop land to provide more housing, widen roads to help ease congestion or put "dynamic lanes" on some roads to handle peak traffic. Clean public toilets more often.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Can't see any improvement in road works and ways to commute

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: First get the basic amenities correct

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Do not support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Do not support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

Yes

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why Racism

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Can't see any improvement in road works and ways to commute

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Everyone is feeling the pinch living paycheck to paycheck with even that not being enough. Asking to increase rates by more is just too hard to ask for and people won't be able to pay. Especially as the increase will be pushed onto renters who already pay excessive amounts for rent.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Diesel will increase in price a over the 10 years meaning overheads will increase. By allowing a cleaner and hopefully less expensive option this will help cut some of the over heads.

Auckland needs more first areas around built up residential areas not only to help clean the air but also for kiwis to enjoy our beautiful nature in nz

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: You can't increase the rates 5% and then add what feels like another increase to the rates. People are struggling as it is.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Lots of council buildings stand empty for most of the day, by using the space for income, it can help the facilities to be improved/upgraded with less cost to the taxpayer

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

I don't know enough about them to comment

The Upper Harbour Local Board are proposing a new bus service between Paremuremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremuremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why: You would hope that people living more than 500m away will want to use it as well

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Increasing housing numbers in areas 20km from the CBD is short sighted if the road and public transport is not there to manage it. A focus on developing areas closer to the city with apartments or terrace style houses will allow more people to live closer to the city without having to be in traffic for hours. This is only possible with the infrastructure around it to keep people off roads and on public transport.

An alternative could be to develop areas around major train or bus depots which will encourage the use of public transport.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Auckland infrastructure is playing catch up with population growth and this needs to be improved across the board. Auckland should also pay higher rates considering the more availability to jobs and better pay compared to other regions

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: All positive steps towards a more sustainable future. Transport routes and availability should also be factored in as the easier these are to use, the more they will be used. How is there not a train that links Whangarei to Wellington? Or even to the airport

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Auckland needs to be kept cleaner and greener, in parts Auckland looks very shabby and ugly.

The streets should have regular litter removal and littering should be an offence.

More tree lined streets.

Signage on shops should be discreet and windows should not be covered in advertising. Higher standards are needed in monitoring food establishments.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: This is needed to maintain the standard of our services taking into consideration Covid recovery

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: While making a decision on buses would recommend smaller size of buses during the change to electric or gas on some routes. A study may please be made on this aspect.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: More effort may please be made to prevent deterioration in quality without increase in investments .

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Other

Tell us why: A study may please be made to close down some facilities which do not add vale or are not used.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Don't know

Tell us why: The information seems to guide me to hate it, but is non-specific so I can't be certain if it is bad or good

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Our city has probably one of the highest tree densities in the world, this is amazing in comparison to other major cities. It is important that we keep it that way. Reducing carbon emissions in transport is a great start which will have a strong flow on effect to the rest of the country. I hope that the diesel busses are being up-cycled as best as possible

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: As a key issue this needs to be maintained over time, so being at an acceptable level as soon as possible and keeping it at that level is important. The longer it takes to start the longer it will take and the harder it will be

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: I don't agree with having less community assets, but it is more valuable to have them as multipurpose facilities. For example- having larger community halls that may hold 6 spaces instead of 3.

Rates will inevitably go up, but no one wants to spend more money, and it is unfair that people who don't use these services have to pay for them. Shifting funds is better, rather than increasing them

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Investing in our transport, water supply, wastewater and stormwater systems, and in environmental management as included in the budget is vital because as population increases the traffic issues in auckland are only going to get worse , and we cannot be relying on each household to save their allotted ammont of water each week instead of properly upgrading and fixing our water supply, wastewater, and storm water pipes and systems when there will be other droughts in the future.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: It would also be good to introduce commercial scale composting which can be profitable and help reduce what land fill waste by encouraging the use of biodegradable packaging by having somewhere for it to actually biodegrade. 100% support move to electric transport because as traffic will increase with population growth, more people need to move to public transport use to counteract congestion, and we need adequate and green solutions to this.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Aucklanders value their beaches, and investign in the environment means investing in peoples values. One suggestion is the using Netting Trash Trap systems for stormwater (<https://stormwatersystems.com/stormx-netting-trash-trap/>) water that don't just reduce sand and oil runoff but stop litter and debris that shouldn't flow from storm water systems into our rivers, harbours etc. By having a council funded team that empties these nets regularly in a similar processes to normal rubbish collections, this could provide a valuable environmental protection and service to auckland water quality.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: The stories are apocryphal about the wastage and inefficiencies at Auckland Council and its subsidiaries, and I just have no faith any sound financial or operational management exists, let alone suggesting just throwing more money at the problem by soaking the ratepayers again. Reduce social spending, cut the payroll costs by both eliminating underperforming staff (ever heard of KPI's?) and reducing the salary levels to market-related, and improve efficiency - actually try and run the place like a business not a cash cow.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: As above. The council has done a shocking job of managing investment historically and I frankly see this as a smokescreen. Certainly investing in sustainable alternatives is right and can also be very cost-effective, just don't give the current bunch extra money to do it.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Continuing on a theme - we underperform so please give us more money and more time to do it.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Smaller targeted facilities are easier to manage, maintain and monitor. I've been involved in some of these and seen for myself how larger "consolidated" facilities become money pits, remove ground-level accountability and frankly become glorified monuments to council egos.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

This council has never seen a tax it didn't like. Get rid of the idiots, make people accountable, and have a decent plan. And you don't need \$500 an hour consultants to create that plan.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: I would rather see no rates increase, and you find extra savings by reducing your staff bill, and stop wasting money on race based and cultural projects.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: This is a hoax. More money from the ratepayers will not make it rain more....

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: This sort of resource should be user pays

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Before raising the rates and hitting the middle class as usual, how about cutting back on Auckland Council's management fat cat salaries? It's an absolute disgrace the size of some of the salaries.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: Action on climate change should be put back on the back burner until the NZ / Auckland economy and debt levels are reigned in before wasting money on such items.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why: More to spread cost evenly over community

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why Uplifting and listening to our maōri people is necessary and important.

Increasing the amount of trees will help support a diverse range of insect and bird life, and be of social value too.

Supporting local events and our local waka is great.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Increasing tree plantings where possible along streets and within parks is important to increase wildlife diversity.

Shade is hard to find in many parks so more trees would increase our family's enjoyment in shared spaces.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: While increasing the rates of the ratepayer average, this minor detachment from Auckland citizens will go a long way to securing a headstart into the healthy recovery of our economy from COVID-19. Not only is this beneficial to Auckland, but also to New Zealand at large, giving it an even more attractive position in the current pandemic world.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: This question is the sole reason why I decided to share my input on Auckland's 10-year Budget. Climate change is an incredibly important issue that we must address and take action to slow. We must be held accountable for the damage we are dealing on our planet and as such, this proposition is one I wholeheartedly support. Not only this but pushing citizens to plant their own greenery and switch to more sustainable everyday options is something we should be looking to as well.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: The fact that this extension and increase support the work currently being done on our waterways, and is included in the aforementioned proposed rate increase is a no-brainer for me. I am in support of the rate increase and therefore am in support of this extension/increase to our waterways.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Other

Tell us why: As Kiwis continue to vigilantly fight COVID-19, we are never certain of this pandemic's outcome. Therefore, lowering the costs of community investment overall is something we could potentially look into. Lowering community investment means there is more money for Auckland Council to invest in other, more urgent factors of the city. Not only

this, but community events and venues are not as populated as they once were pre-pandemic. It only makes sense to cut these funds and use them for other impactful means.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why: I believe that it is only fair for businesses within 500m walking distance of a bus stop to be charged, as their financial gain can be beneficial for local investments such as safer and more secure bus stops.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why While there is a clear focus on ensuring communal spaces within the Henderson-Massey area are kept safe and welcoming, there needs to be a larger focus on delivering these fronts. Some community areas are rather looked down upon (such as the local Moire and Spargo Parks), due to their recent reputations and excessive violations of tagging. Not only this, but bus stops in the area are constantly being violated in similar fashions too. Community areas simply need to become safer.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at aucklandcouncil.govt.nz/privacy and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: We have waited too long already for much needed infrastructure investment, it has to happen now.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Climate change is real. That's a fact. We need to address it because the alternative is a horror story and will cost way more in the long run.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Water quality is very important, not just for humans but for our environment that we heavily rely on as well.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: I support moving toward a new and more modern services, etc, as long as it doesn't disadvantage communities who most need them. All of Auckland must benefit. We already see huge imbalance in spending in areas that have higher rates of poverty vs more affluent areas.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: I dont see why the people who own assets such as houses and therefore pay rates, should be subject to the increase. It should be applied to everyone to wear the cost. I am a first time home owner and have been impacted by covid-19. It seems unfair we pay the increase in rates yet renters dont.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why: Because of COVID-19.. many have lost jobs including me ..

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Cannot afford anything anymore.. with this proposed to increase 5% rates.You proposed its a one off increase. Its all rubbish. Same as last time

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Don't know

Tell us why: Still not sure where we get the funds from

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Everything is tough right now with covid19. So I cannot afford to pay any extra anymore

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

The Upper Harbour Local Board are proposing a new bus service between Paremuremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremuremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why The current priorities seem to be very targeted to specific cultural groups but do not cater to any others. I would encourage more higher learning opportunities and more street maintenance as well as job opportunities in the region.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Climate change, Protecting the natural environment, Keeping the suburb and community clean, well lit and safe to be in. Encouraging education and hard work through job opportunities and incentives rather than dole bludging.

In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Everyone in this country is affected by Covid, and has to sacrifice some wishes and plans to recover financially. Also the Council needs to do that, and can't just take it from people via the rates. Please be a bit considerate and also let us know to what extent the Auckland council has determined amongst themselves where cuts can be made, if at all (also salary-wise - you also had no salary increases like many people in the country?), or whether the 5% increase in rates is your only solution to financing your plans.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: See question 1 - now is not the time to squeeze people even more to fulfil your wishes. Wait a couple of years until we all have recovered. Tree planting the government has promised since elected a couple of years ago, all I see is tree felling however. Any tree is good, it doesn't need to be native - or is this your excuse to fell non-native trees?

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Other

Tell us why: Shouldn't this be covered by the water bill? What do we pay immense price for waste water?

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Please be considerate - we all suffered from Covid and have to be careful with our spending. The council seems to want to continue with its immense spending regardless.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

I reject them all. Now is not the time to squeeze blood out of people for things that could have been done years ago already.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: Why should people pay for this bus line even if they may never use it? You people just load expenses on others

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why I do not support priorities that are based on rate increases and bleeding out people

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at aucklandcouncil.govt.nz/privacy and at our libraries and service centres) and with the Privacy Act 1993. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Mor funding should be coming from central government and you should not be putting more pressure in people in an already overpriced living situation.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: The idea is great but don't push public transport prices up further.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: Again. Funding needs to be from central government. Pressure on people in an over priced housing and rents will make things worse for people.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Do not privatise public services, including the buildings. If you lease and rent, costs for these go up.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Anything that increases rates for snotty overpriced Auckland property owners tickles my fancy right now.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: There's only one priority right now, and that's housing. Save your saving the planet for when people actually have dignity to look forward to if they survive.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: I feel like having unswimmable beaches in Auckland will help humans to realize the impact of overpopulation on their environment.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Wellington didn't like shared libraries and neither do we. No thanks.

5. Rating policy

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: i don not support new infill housing when the infrastructure isnt updated to meet the current let alone the requirements of new and upcoming housing developments thus you take our rates spend it elsewhere then ask us for more rates \$\$\$ to help with infrastructure when its a disaster already that needed upgrading years earlier, this also congests urban streets when developments dont provide parking instead the developments will build say 7 new dwellings with no parking for say at least 7 cars if not more cars, this will increase the cost of insurance it will also increase the

chance of theft and not only this will make roads narrow, this is carnage waiting to happen. Your current waste water is a shambles i wont go into that

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: you waste our money mindlessly and without accountability

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: you do not spend our \$\$ with care you think the country is made of \$\$you waste our \$\$ without care and think you dont have to answer for it.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: you eventually close all public centers saying the cost is prohibitive

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Other

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

your ineffective ability to utilize rate payers hard earned cash is stupid

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: local govt has taken loads of cash from us over the years and really not given any grerat back in return

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why honestly a waste of monies

Waitākere Ranges Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why show me an effective plan where if you over spend or misspend that you can show remorse and accountability then i may support an initiative

Whau Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why same as above

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

i do not support new infill housing when the infrastructure isnt updated to meet the current let alone the requirements of new and upcoming housing developments thus you take our rates spend it elsewhere then ask us for more rates \$\$\$ to help with infrastructure when its a disaster already that needed upgrading years earlier, this also congests urban streets when developments dont provide parking instead the developments will build say 7 new dwellings with no parking for say at least 7 cars if not more cars, this will increase the cost of insurance it will also increase the chance of theft and not only this will make roads narrow, this is carnage waiting to happen. Your current waste water is a shambles i wont go into that

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Definitely not the time for a 5% rates increase.

Who has the money to do this post covid.

Stop your damn waste with subcontractors alike and get the heck out of the property business.. Panuka shouldnt exist. its disgusting that you think your budget is justified,

Ask central government to send new returnees and etc to other cities. We cant absorb any more.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: You need to wait until we recover before you increase any investment

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: Its too hard on the rate payers to fund every little thing .Everyone who lives here should pay not just the rates payers . User pays is fairer than the present system

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Because we paid for the community centers in the first place, How dare you close them whn the need for shared space is just growing. Just charge with a user pay system. I beleive that you pay 3 times as much to contractors than is fesible and you need to employ your own workers .Then you have control over the spend and quality of work..A no brainer.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Other
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Farms are desperately needed for our exostance. ,to start charging urban rates on farm land will result in sell off of all farmland and very quickly we will have less food production and more enviromental harm by adding transport miles for food.

This is

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: Why the heck should just one group pay for this?,

Bus servise is a vital link to evryones life. Why are you again just targeting ratepayers.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why I think you propose way to much without thought to what is really needed. Its all about the budget instead of our quality of life.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Sporting facilities need more funding not less.

It saves in health costs and quality of life for everyone. Panuka shouldnt exist.

This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: I Believe that it is going to cost us more in the future then what the current budget is now.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Its a great idea to invest in Auckland's recovery and investment to move towards an enviromently friendly Auckland

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: Its to expensive already and does not need to drive the poverty in Auckland and further then what it is currently

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: I like the assets we have right now and don't want them to close or combine, Our rates are already high and the council and staff should take a 35% pay cut to settle the differents.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

I think all the proposals need to be reviewed.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why: No

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: The Auckland council is continually over-spending and under-performing, the answer to this is not to increase its budget at the expense of rate-payers. I would prefer to see the council start to take responsibility first by a thorough review and overhaul of its own systems and staffing to first ensure it is working effectively and efficiently before writing another blank check which I pay for and do not benefit from.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: Neither the train nor bus systems are affordable or efficient, what is the point of making them more 'eco-friendly' if they are not being used in the first place?

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Sure, but why now? this is too little too late, what has the council been doing for the past 20 years? why were people who wanted to install water tanks in new-builds essentially penalized for doing so when this would have helped to diversify water sources as well as avoid the environmental damage of run off water which we are also charged for!

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: It is not right to charge people for a service they might not even use. If this service were initiated it should be paid for by fares only.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why Most of these are 'cultural' projects with no tangible value or return for the rates we pay. If money is being spent on this I can see why the council wants additional funds. These are pet vanity, PC projects, not what the council should be focusing on.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Sustainable, transparent, accountable Auckland council management. Real long-term solutions to improving the efficiency of services in the city, such as proper recycling bins, solar-powered bins with sensors to reduce unnecessary pick-up crews, efficient and affordable public transport, less council oversight on basic building renovations, justification for constant road repairs on critical arteries which last for months, etc.

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why I support continuing funding key services that benefit the majority of the community, like an additional aquatic centre and the Te Whau pathway, parks and playgrounds, libraries, community and recreation facilities

Other proposals are not a priority in my opinion

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

High density housing should be restricted to suburbs that are within 1-2 KMs of a train station, too much congestion due to increased residents and out of area motorists transiting through our suburbs to the motorway otherwise.

Buses aren't reliable enough for most motorists to switch from their cars, trains need to be accessible to encourage that switch.

Important privacy information

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: Support the budget, but not the Orewa seawall, removing late return fees for libraries,

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: our children need a world worth living in

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

focus on intensification and investing along public transport corridors so that we can have decent transport options instead of endless sprawl

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: House owners doesn't mean they have high income and no impact from COVID-19. They are suffering too to pay casual rates and fulfil day to day needs. It is not a good idea to build revenue from the affected people. It looks like you given wage subsidy and collecting it back in terms of house rates. Strongly do not agree on this.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why We already have enough parks and planting. It just need to be maintained. The most causing issue is transport and traffic. Good to work on it instead of spending for other things. Universal drive should be two lane on each side, which would separate the road to take motorway and others can take another road. Because of lacking this the road is blocked and to reach Lincoln road itself takes 30 minutes in peak time.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Need development in schools. Not enough good schools around. Compost bins to available in suburb to reduce the waste on landfill, which will eventually decrease the waste collection by council. Due to decrease in land space no garden space available for new homes especially apartments therefore, community garden should be available and users can use the space for growing veggies. The rates in supermarket has increased a lot may be because of export costs are high. So, please find the solution.

This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Important to be efficient and get the most use out of facilities.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Depends on each case individually for rural properties maybe they don't require same services and are happy with what they have if it's more affordable for them.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why: Local people affected by this would be more invested to have an opinion.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why Seem like a balanced focus. In terms of the environment I think there should be more government schemes introduced at local levels for solar energy for every household and grey water tanks and water tanks. The composite material these structures are made up of make them far stronger and durable and can effect lifelong savings on energy and resources. Perth and parts of Australia have had schemes which help people to buy solar for there households because it make sense to use the natural resources available for each household.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Housing, people being able to buy a house. Affordable deposits. Perth have a Keystart programme where people only need 3% deposit probably highly unlikely with the competition in Auckland for housing but it's sad for people brought up here.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Don't know

Tell us why: Should be fine but only as long as this increase in rates is matched with strong prioritisation of investments in order to alleviate the impact on households.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: About time

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Seems pretty important.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Not ideal, but it was bound to happen.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Other
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Climate change is a key problem

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: An urgent and remarkable climate response is required

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Water is a basic need and must be good quality

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Makes business sense to do this.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why: Seems fair since this is a shared benefit

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

Upper Harbour Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? Other

Tell us why Were that the case, and we were truly urban, then I say - yes, include us. However, that is not that case. From not having a true, comprehensive footpath system, to street drainage systems, to a community centre within a 15-minute drive (which is completely contradictory towards working to a greener society - we shouldn't be driving, we should be walking or using public transport), to not even having a bus service on the Island - these are all cases in point that Herald Island is rural, not urban. If those things were in place, then let's roll. However, it's not.

7. What is important to you?

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Auckland's infrastructure desperately needs work if it is to seamlessly and effectively support the large number of people living here.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Sustainable initiatives are important in the long term, but this would need to be supported by upgrades to the public transport system (and routing) in parallel

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Don't know

Tell us why: From what I understand this seems like one of those expenses (and increases) that not all families can afford particularly as wage growth isn't matching the cost of living

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Cost effective

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: The 5% one off increase appears to be in addition to the general 3.5% increase according to the following statement but does not show on the graph: The cost of the proposed one-off increase represents approximately \$38.50 a year on a residential property valued at \$1.08 million, in addition to the currently planned increase of 3.5 per cent.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: The park in Zita Maria Drive Massey is a good park but lacking in amenities. Its OK for use during the dry but pretty unusable during the winter. There are no walking tracks preventing families using the park when wet (pushchairs, bikes, runners, dog walkers and walkers. Good tracks would see the park used more for fitness and recreation.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Other
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why General talk about maintaining parks but no talk about what they are going to do with the parks. The Zita Maria Drive park is a good park but does not hav all wearther tracks, preventing the parks being used in winter (probably more like 5 months per year). Having a community asset unavailable for use for that length of time due to weather is unacceptable. Lets see some progress on practical useful things rather than fancy thinks. The park in Zita Maria Drive Massey is a good park but lacking in amenities. Its OK for use during the dry but pretty unusable during the winter. There are no walking tracks preventing families using the park when wet (pushchairs, bikes, runners, dog walkers and walkers. Good tracks would see the park used more for fitness and recreation. Some calming actin in my street (Clyma Place) to stop the hoons speeding up and down all day.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

An all weather park that can be used for walking, cycling, pushchairs, walking the dog, running etc. Well kept footpaths. Stop cars being parked on the footpath thereby causing pedestrians to have to step on to the road. Some calming actin in my street (Clyma Place) to stop the hoons speeding up and down all day.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Don't know

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why:

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: I too often see no one on a bus driving in bus lanes. Invest in a better public transport system

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: This should be more of a priority. Watercare have seemingly done nothing in a long time and we are already paying catch up to do. Get the water quality sorted with a matter of urgency

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Public spaces need a complete review as they are another old fashioned system that is underutilised and over invested in. Money could be better allocated in a more modern style of public facilities

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: We need a complete overhaul of Auckland transport and the public transport system not force people to pay for a service they will not likely use

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why So much community spending on what? We have amazing creeks and rivers that the community would love to be swimming in filled with trolleys and rubbish. I feel this could be fixed with little investment, you also walk in parks and smell sewerage and the pipes leading towards the estuaries or other areas that are overflowing due to massive amounts of extra housing put in without any upgrades to systems. It just doesn't make sense that we are building and building with no upgrades to the main systems put in place when the community was founded.

We struggle getting to work due to traffic and little foresight into the increases of cars on the roads and denser housing, we don't have time to use the community facilities! Let's work on the basics, parks that are clean and don't smell like sewerage and work on public transport that works and gets people off the road

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

On top of previous comments, does the council plan on saving any money on the salaries they pay? The rates are extremely high and the entire environmental services budget for my district would be one person's salary. We just don't seem to get value for money with what we spend, I have lived in the area on and off for over 30 years and really have not seen anything that you would refer to as progress, except for the bike track Westgate to city! I too often see no one on a bus driving in bus lanes. Invest in a better public transport system

This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Infrastructure requires updating .

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: The bus fleet need to be clean running .

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: The cities water quality is keys to a healthy city.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Many of the facilities are under utilized.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Do not support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

I do not support this

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why: The bus service will benefit these homes .

And not anyone else .

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why no comment.

This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: I am sick and tired of raising this. The council is top heavy and over paid. Why should rate payers foot the bill to accommodate your lifestyles?

Top tier and senior management need to take pay cuts like the rest of us. Start reassessing priorities like is it necessary to turn downtown Ak into this carless place. I will not visit the city because it is not user friendly for me and the services I provide. Easy solve for me - i take my business away from this space now.

Its not just this rates rise we face as a result of COVID - get your head out of the clouds and come live on ground zero

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: What are the priorities right here right now changing out diesel buses or rates increases for already struggling households. This has to be the lesser issue until we come out of this lul

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Change the strategy. The water quality dramatically improved with lockdown to me that was a cost free initiative that no one expected but the environment relished in. It took no many power to fix either.

If this strategy of yours was working already why are so many auckland beaches still polluted.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Other

Tell us why: Im reluctant to support anything you propose now...

Ive said this before as well. Parks and maintenance staff should remain - and get a payrise for the shit they have to put up with (I do not know any parks staff either) but we do live next to a major park and their work is under rated and under valued with some quite misguided rules they need to follow. When we have followed up with the counsel seems to us that call centre staff and the bureaucracy in which they must operate means nothing gets fixed, changed or improved.

Back to basics guys. Send your top dogs out with these guys to get a real understanding of whats going on. fix the grass root problems before increasing rates all the time

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why I've said it all initially. Go back to drawing board council get the basics sorted before branching out.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

no. i think i need to stop as its annoying me more and more..

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: As long as a return to 3.5% is guaranteed in years post 5% rate rise I would support improving infrastructure especially in our suburb. Having only moved into Te Atatu South 8 months ago there are 7 houses being built. In the same time the roads have been ripped up and you are talking about 7 more families in 200mtrs of our street soon to also be utilising water, power, storm water, sewerage with no improvements. Parking on roads, causing traffic issues, no speed humps for safety of residents but also children walking to school.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Every little bit helps and we have to start somewhere.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: It feels as though we are using a bandaid approach as opposed to tackling the true issues off pollution, making those responsible for reducing water quality such as industry pay for the care of and improvement of water quality. Definitely important I just think that there must be another to do it better, quicker, sooner.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Yes but build or improve better facilities, libraries that have the ability of multi purpose. Leasing and shared facilities sounds fine as long as ALL suburbs/communities are supported not just those richer suburbs.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

As long as electricity TR is paid by Vector not an additional cost on the tax payer. Further to that plant fruit trees for goodness sake!!!!

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why: User pays but is that right to make all ratepayers pay for a service they may not use?

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why I believe that infrastructure improvements are much needed with population and housing boom in this area. We have to be prepared and be careful not to get behind and over look what is required

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Further to that plant fruit trees for goodness sake!!!!

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: There should not be a rates hike when people are struggling!! Cut the number of staff and over paid executives. The money is wasted and Aucklanders ignored when they provide feedback. Wasted money and destroying the communities with terrible ideas that are making this city unliveable.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: It is a luxury that we cannot afford obviously if you need to increase rates to pay for it. Put pressure on business/producers to reduce their polluting and single use items rather than hurting hard working families.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: We cannot afford this at the moment and it can head in the right direction without it needing to be done in the immediate future.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Will result in less services at an over inflated cost to maintain. If the costs were realistic and not based on blown out wastage it could be done at a fraction of the cost. Get people helping do things in their own communities again instead of paying some contractor a ridiculous price to do a sub standard job

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Do not increase the rates. People have done it touch due to covid and it's disgusting to try to take more and more from them!

The Upper Harbour Local Board are proposing a new bus service between Paremuremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why: User pays.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: It would mean higher rates and more money for your executive staff pay increase. People are struggling-look around you. I guess that your books should be reviewed in depth first.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: Where would the money come? Higher taxes and rates with poor efficiency in public transport services?

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: You have CEO getting ridiculous amount of salary and yet could not solve Auckland water shortages.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: More rates increase? Give the people some breaks.

I would support leasing it for additional income.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Already seeing the affects of not keeping up with infrastructure with increas of building

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Even for health reasons, love fresh air

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: Sadly have not kept up with progress and housing infrastructure

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Existing adequate for more years, financ better spent elsewhere

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Do not support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Not sure

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why: Don't feel it is applicable

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Tell us why

[Henderson-Massey Local Board](#)

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why If we had more action from Ward people, we would see progress, very slow in responding

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

No, pleased with what has been covered

This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: We live in West Auckland where we already get less for our rates than our Auckland Super City counter parts. Perfect example is the antiquated having to pay for and attach a sticker to our rubbish bins - which get stolen all the time - and which other parts covered under Auckland City Council do not get charged additionally for.

We have 4 rental properties that we have taken the risk and mortgages on ourselves, and which we are paying off as fast as possible - providing housing for local West Aucklanders that neither the Council or the current Government provide is able to provide under their own Housing scheme/ house building schemes. Why should we as landlords trying to set ourselves up for our own retirement - so that we are not a burden on society when we get old - get further punished by having to shoulder the cost of additional rate increases on these properties? Costs that landlords like ourselves do not want to have to pass on to tenants but many investors may not have a choice in order to keep their tenants in housing.

You say that the rate increase will be a one off, but find that hard to believe. There are already rumours circulating in the news that the plan is to have additional rate increases of up to 20% - is the aim to bankrupt hard working middle-income workers?

All over the news has been the fact that Aucklanders have paid \$250,000,000 for the latest America's Cup infrastructure which has done nothing for the real infrastructure issues in terms of (for example) roading, motorway congestion, and water & waste water issues that Auckland as a whole and especially out West Auckland (with the mass housing developments in the outskirts (riverhead, coatesville etc) have to contend with in terms of sub-standard roading/civil/water and waste water and insufficient and congested motorways that wasn't able to service the original population let alone now with the increase in housing population and associated traffic due to these mass new subdivisions that have been pushed through by Council regardless of the infrastructure being able to cope.

Why should Auckland rate payers continue to be asked to pay for Council's continued mis management, bad decision making and general inadequacies? Perhaps Council needs to look at their outgoings in terms of non required infrastructure and non-infrastructure related spending (staff numbers and salaries) of rate payer money in the first instance before putting their hands out to Auckland rate payers as the go to.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: It has been reported that use of public transport has gone down to less than 25%. As per above comment, why spend more Tax payer money on additional investment for Services that Aucklanders obviously have no intention of using. When walking down the road and seeing busses with sometimes only 1 or 2 people on board, and with whole train carriages being empty with again only some carriages have a handful of people on them, this does not seem to be an economic solution. Again, if this is one of the main reasons for wanting to increase rates to 5% then seems counter intuitive. Bus and train fares need to be far lower cost than what they currently are, and much more reliable to get Aucklanders out of their cars and onto public transport. Currently taking a train from West Auckland to work and back five days a week would be nearly double my fortnightly petrol bill, and I would still need to drive to and from the train carpark, at a much longer overall commute than driving in when I'm needed to be at work by.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Whilst of course I would like Aucklanders to enjoy fantastic water quality. I think the first thing is to ensure that our water and waste water pipes are up to scratch. Aucklanders due to Watercare's continued mismanagement have had to endure water restrictions due to leaking water pipes, with dams half empty not just because of lack of rain but because the water never gets there in the first place. We should be focusing on this first, along with our waste water infrastructure which is probably in just as bad a state of disrepair and overuse due to increased housing developments. Start charging the housing developers more for infrastructure or stop approving housing developments where water and waste water infrastructure clearly already can't cope and as such our overall water quality in terms of our streams, beaches and harbours may be naturally more protected and suffering less because of it.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why: Perhaps a user pays system as opposed to a rate payers system would be a better approach. With technology and books being available on line, how many people still actually visit libraries these days? Online services would be much more sensible.

We have plenty of Community facilities in West Auckland that always look shut, with the exception of the occasional hiring for celebrations. User pays for things like art galleries or privatising them would be a better solution.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Other
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Commercial accommodation providers should continue to pay bed taxes - once we get international visitors again - as they can build that into their room rate. However I do not agree with the average Kiwi renting out a bach via AirBnB or bachcare etc when t

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: again, stop making Auckland rate payers pay for services they clearly do not want and are not using to full capacity with what is already being offered currently.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why a recovery budget should as it imply focus on recovering what needs to be recovered for the betterment of the community as a whole, not focus on extra expenditure that West Aucklanders as a whole will not benefit from or be interested in. Let's recover first from the impacts of COVID and lack of international tourists and get our feet back on the ground before spending money where it is not currently urgently required.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

It has been reported that use of public transport has gone down to less than 25%. As per above comment, why spend more Tax payer money on additional investment for Services that Aucklanders obviously have no intention of using. When walking down the road and seeing busses with sometimes only 1 or 2 people on board, and with whole train carriages being empty with again only some carriages have a handful of people on them, this does not seem to be an economic solution. Again, if this is one of the main reasons for wanting to increase rates to 5% then seems counter intuitive. Bus and train fares need to be far lower cost then what they currently are, and much more reliable to get Aucklanders out of their cars and onto public transport. Currently taking a train from West Auckland to work and back five days a week would be nearly double my fortnightly petrol bill, and I would still need to drive to and from the train carpark, at a much longer overall commute then driving in when I'm needed to be at work by. Whilst of course I would like Aucklanders to enjoy fantastic water quality. I think the first thing is to ensure that our water and waste water pipes are up to scratch. Aucklanders due to Watercare's continued mismanagement have had to endure water restrictions due to leaking water pipes, with dams half empty not just because of lack of rain but because the water never gets there in the first place. We should be focusing on this first, along with our waste water infrastructure which is probably in just as bad a state of disrepair and overuse due to increased housing developments. Start charging the housing developers more for infrastructure or stop approving housing developments where water and waste water infrastructure clearly already can't cope and as such our overall water quality in terms of our streams, beaches and harbours may be naturally more protected and suffering less because of it. a recovery budget should as it imply focus on recovering what needs to be recovered for the betterment of the community as a whole, not focus on extra expenditure that West Aucklanders as a whole will not benefit from or be interested in. Let's recover first from the impacts of COVID and lack of international tourists and get our feet back on the ground before spending money where it is not currently urgently required.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Growth is a major factor for the economy and Auckland Council is focused on this.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: Climate change policy should be rolled out from the center. The budget and funding must come from them and not be shoved down on the rate payers from Auckland.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: This has to be taken on a year by year basis.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Other

Tell us why: Events are very popular and having the right team run our venues will result in them earning revenue and being self providing. We must push this further to generate revenue.

Recently I found it most difficult to book a private venue owned by the Council. Revenue the council could have earned from me.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Other

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Property prices have gone up. So the rates increase has to also change with growth.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Public Transport is far too expensive and ways must be found to make it more affordable. This will lift congestion. Events are very popular and having the right team run our venues will result in them earning revenue and being self providing. We must push this further to generate revenue.

Recently I found it most difficult to book a private venue owned by the Council. Revenue the council could have earned from me.

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: How can you justify so many billion dollars? I read an article once about a small stretch of walkway close to airport (that was over a bit of swamp granted) that cost more than a million dollars. A couple of builders could have done it for a few grand. Houses cost so many hundred thousand. So things like that make me question where on earth does this money go.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Obviously any help toward climate change is good

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: Where has all the previous money gone and why flood a city with new people and new housing that is going to run out of water for the people already there anyway??

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why: Case by base basis. Some of these places are well used and appreciated, some aren't. Some help bring in revenue, some are money pits.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why: 500m is as you say walking distance and this is for a bus

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why All the maori land and language stuff - irrelevant to restoring the economy or securing bright future for younger generation in this country

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Housing and growth - dwellings with no carparks RIDICULOUS and where are all these new people going to go to school and the doctor - education and medical are already so overwhelmed does not seem fair to rush so many people in FIRST

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Council must make more drastic measures to reduce on going operating costs, in other words reduce the out of control bureaucratic costs. We dont need public servants justifying their existance. Dear Councillors,

This is a submission on the Council's 10-Year Budget, Long Term Plan ("LTP").

I submit that the proposed 5 percent rates hike is unacceptable.

While Council faces revenue pressures, this is simply a result of the economic environment facing all Aucklanders. Ratepayers facing job losses, reduced hours, and the pressures of rolling lockdowns should not be burdened by higher rates hikes.

In addition, the proposed increases to water charges are significant, and could be avoided if capital from Council assets, such as Auckland International Airport and Ports of Auckland, was reinvested in improvements to water infrastructure. Reductions in operational spending, such as that spent on tourism and economic development, should be cut, particularly that which is duplicated by central government.

Both rates and water measures will hit my pocket, and the pockets of Aucklanders who can least afford it.

As a ratepayer, I submit that instead of coming up with ways to charge me more, the Council should focus on providing value for money, delivering core services and doing more with less, especially given the impacts of Covid-19.

I support the submissions made by the Auckland Ratepayers' Alliance, available at http://www.ratepayers.org.nz/2021_ltp_submission.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: Central government's problem.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Prudence required, stay with existing plans.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Wasting too much on Community services.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support

This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: We are a growing and changing city and need solid investment in a plan for the future

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: We only have one planet! We all need to play a part in growing initiatives and education about what we can do to live more sustainably

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: A big shake up in the way we use and treat water is a long time coming

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: These facilities foster community and build a culture we can all be proud of. They give inspiration, which is priceless in building a sense of belonging and inclusion

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

As long as the changes can be communicated effectively, and possibly introduced gradually to allow rate payers time to adjust for increased costs, then I agree that we all must pay a bit more for future initiatives

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why: Shares the cost more evenly and widely so the cost is reduced overall across parties that will benefit from the service

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why Transport transport transport - and welcoming places also that improve community inclusion

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

There is a lot of new townhouse blocks in my area (Te Atatu Peninsula). Single homes removed from properties and replaced with 5-11 townhouses. We need more public transport to account for all the extra people in the area, and improved infrastructure.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Auckland Council should go back to just core activities, infrastructure only. eg, Water, sewage, Rubbish, transport, parks, etc. Drop everything else and let others pick it up on a user pay basis eg. If Council dropped Movie & Music in parks, Parades & Festivals, the arts community celebrations etc. the savings in staff cost alone would be very substantial. CORE ACTIVITIES ONLY - CUT IT TO THE BONE. The next step would then be to get rid of Community Boards.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Do not support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Do not support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Do not support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: Property capital values in Auckland have increased significantly based on changes through the Unitary plan. Development is now allowed and encouraged that generates traffic congestion traveling through areas and street parking as no provision is made within the development. Approval is being given to large scale dense housing developments with poor standards of finishing - approval is being given to build legal slums. Developers have inflated land values - moving into areas offering amounts of money far in excess of realistic values. The houses get flattened to

ground level - materials that could have other uses are been carted to our dumps costing the ratepayer more. My house is worth less than a 1/4 of its current capital value - my land does not contribute to the transport congestion, waste water, infrastructure, high consumption of water resources etc. The elderly are being pushed out of their homes as the rates become exorbitant and living conditions become intolerable with two and three story dwellings rising up beside them blocking the sun - with up to eleven on a 800sqm site.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: There is little incentive for the public to use the public transport system. It is expensive and inconvenient. Attention gets placed in the wrong areas and although it sounds good makes little impact to the issues at hand.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Based on past performances more lip service being paid to issues at hand. If fluoridation is part of a water improvement plan I am not interested. Water quality of our beaches and foreshore has been allowed to get into a shocking state. Again over developing puts pressure on existing systems. It's what council approves and allows to take place and what they ignore for year's that contributes to the failing state of affairs.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: I support a new approach for community services and consolidation. I do not support increasing rates to support community development. We seem to see perfectly good buildings being demolished and rebuilt for a bright new library/community centre that is only utilised by a few.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Other
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Other
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The cost of purchasing homes or renting them in Auckland is prohibitive - increasing rates contributes to the increase in cost of living across the board.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:**Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?**

No

6. Local Boards**Henderson-Massey Local Board**

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why It seems to be top heavy in supporting certain areas or projects that don't necessarily benefit the broad spectrum of community.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

The Auckland Unitary Plan encourages a more compact city which uses infrastructure more efficiently BUT places more and more pressure and demand on existing infrastructure as upgrading does not keep up with developing. We are constantly in a backward situation.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: The average income of most of the people has not increased a lot compare to the significant increase of food cost and other necessary expense. The increase in rate will make the family more poorer.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Good for the next generation.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Other

Tell us why: Instead of upgrade the existing system. Can't we invest more for water supply system? Auckland cannot just rely on some dams for all water supply. Why can't we source more fresh water source, e.g. rivers?

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Instead put more pressure on the hard working party, why not reduce the amount paying to the people whos healthy but still taking Relief? Why not we force them to work so we can save more money for the public?

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

One of the killing point now is the house price. This mainly due to the high price of land price. Government should dramatically invest in new infrastructure. This will significantly increase the amount of new land can be used to building new houses. And using the policy to limit the price of the land. This will make more jobs, new business centre and lower the housing price at same time.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Tell us why too general a question

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

The housing developments that are happening all over the city are thankfully providing much needed housing. My question to the council is how are they meeting the higher demands in these areas for facilities and amenities. The model in Hobsonville shows careful town planning to cope with future demands. In Te Atatu there are already issues with water pressure, parking, traffic congestion and schools that are full with no planning for in zone higher demands. The council speaks above of plans of minimising their facilities, yet allows housing developments where there no is room for a small washing line let alone a place for children to play. How is the Council going to provide safe LOCAL WALKING DISTANCE outside spaces in nature for children that is so important for wellbeing. How are they going to provide community hubs where people can be in community together, also a HUGE factor for wellbeing. The responsibility with council lies not only in how we come through this challenging time economically as a city but how you work to improve the quality of life for ALL people and living creatures going forward.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: I am not in support of the one-off 5 per cent average general rates increase for 2021/2022. This should remain as planned at 3.5 per cent. Increasing this one off rate will just add more pressure and stress on the communities as most people have not had any increase in incomes

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: I support this partially. I am with increasing investment to plant more native trees. But this so contradictory to what is happening, native trees have been cut down in Avondale, West-Auckland. Why cut down what we have to start looking for money to plant new ones?

Secondly, instead of planning at buying more expensive buses, we can start thinking really at decentralizing some services. Not all services need to be located in the CBD

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: I am against increasing general rate

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Other

Tell us why: Prefer the consolidation idea. Not at all in favor for any rate increase

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support

Tell us why

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why Focus must be on revitalising the Henderson Town Centre as a vibrant business district. Enhancing and reviving the Twin Stream cycleway (e.g. controlling vegetation, exposing parts of the waterways, repairing and widening the cycle path) so that this significant ecological and greenways asset become a local attraction for many residents and tourists, and a place where people meet, and enjoy the landscape of Henderson-Massey LB where its waterways, creeks and rivers flows from Waitakere Ranges to the Waitemata Harbour. Revitalisation of town centres by providing an enabling environment to increasing business and economic activity. Henderson town centre is dying. Major shops have closed including some banks. Since Council staff and AT have left the area, business have suffered because there are less and less people in the town centre. It is no longer becoming an attractive place. Henderson town centre 10 years ago was very different from now. Instead of progressing as a business district, it is deteriorating slowly.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

Yes

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Fixing the water and sewer system issues are more important than transport

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Anything is better than nothing. Too much focus on transport. Support solar power and support the community being pro active.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: With the massive increase in high density dwellings under construction we cannot afford to put off any plans which increase our foothold on environmental protection and reducing single occupant vehicle use, making the public transport network and planting schemes a top priority along with footpath & cycle path upgrades to help draw in more users, we are seeing exponentially higher use of these and small electronic devices are the future of personal transport along with bikes

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Increasing the reliability and cleanliness of our public transport fleet while lowering the cost should be a number priority for our region to promote higher use of the services and drop the extremely high rate of single occupant vehicle use

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why: Spread the load to help more people gain access to our public transport network, I used to live in this area and the services lacked in total

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why Of particular interest is the need for full funding of the Te Whau walking and cycling path, this vital link was needed 30+ years ago and will help draw a whole new group of people into walking and more importantly cycling (both traditional bikes and E bikes + E scooters , these devices are the greatest solution we have to our transport network issues until AT/NZTA/Auckland Council prioritise public transport over single occupant vehicle use). I grew up in Te Atatu North and spent many years riding my bike on the very dangerous Te Atatu Rd and while some of the network is now coming up to a sufficient standard the main connections need to be a priority focus. I now live in Henderson and work in Rosebank Rd, I avoid using my car and only travel by bike as it takes 1/2 the time, is enjoyable and cleaner for our environment as well as saving me fuel money to enjoy more coffee shops in our beautiful region

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: I support the proposed 10-year budget for the purposes of addressing climate change and environmental sustainability, building infrastructure and improving key services that Aucklanders rely on i.e. public transport - accelerate investment in bus priority, roading and others. There are more homes being built in suburban and rural areas but this is affecting immensely on congestion and over-population. This should also be a priority in the proposed 10-year budget.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: It would be a great example for Auckland to play our part in addressing the challenges of climate change, as we contribute a fair amount of pollution and waste to the environment. Replacing diesel with petrol for vehicles, such as 4WDs, utes, trucks and certain SUVs, should be encouraged or mandated in the near future and should follow the excellent idea of replacing diesel buses with electric buses.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: I support the extension of the Water Targeted Rate until June 2031. However, although all Aucklanders have the benefit of enjoying the water of our beaches, harbours and streams, any increase should apply mainly to the homeowners and residents of those living in the coastal areas with minimal increase to those living outside of those areas i.e. Hobson Bay to St Heliers and Manukau Harbour.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: I support this initiative, as many facilities (e.g. community halls and venues) are expensive to maintain. Consolidating facilities and services can help bring communities together by sharing / leasing facilities in a dedicated area.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

I support the introduction of the Electricity Network Resilience Targeted Rate on Vector in order to maintain the trees along the network of overhead power lines and help reduce power outages. Where these works are undertaken, I support a 'pass through'

The Upper Harbour Local Board are proposing a new bus service between Paremoro and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: Unless the residents in Albany and Paremoro frequently commute between these locations, I do not support the targeted rates in Support Options 1 and 2 as they are quite high. The distance between Albany and Paremoro is no more than 15 minutes, by vehicle, so would not be worth funding.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why I support the proposal to investigate options for Te Rangi Hiroa Reserve nursery site to focus on sustainability and food initiatives within the community, as well as the planting of trees to reduce the carbon footprint in the Henderson-Massey local board. Making our town centres and community spaces safe is important for our growing community and the homeless.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at aucklandcouncil.govt.nz/privacy and at our libraries and service centres) and with the Privacy Act 1993. Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

No rates increases because you really don't deliver anything better. I.e Auckland's water shortage.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: No one I know uses a bus, why should the public pay for it when they already pay stupid prices already

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why finish Te Whau Pathway

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

finish Te Whau Pathway

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: One off increase in rates is more sustainable than continually increasing our rates

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Newer buses = less pollution and reduced maintenance costs

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Needs to be done NOW!!!

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Makes sense

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Other
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

N/A

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: Not everybody would need to use this service and so should not have to fund it. If the route is viable then passengers would be the source of revenue.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Ridiculous increases to rates for West Auckland areas which have seen zero council investment since the introduction of the "super city".

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Don't know

Tell us why: The ability for residents to work from home and not commute would reduce vehicle emissions significantly in Auckland but this is not an option for many residents in Coatesville and Dairy

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: West Auckland again not benefitting. Many homes of which use tank water and are unnecessarily targeted with rates which in effect up the rate if water substantially.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Other
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: Should be user pays!

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Continuing increases to rates whilst simultaneously removing services, and increasing Council staff salaries.... it's a joke. NZ rate-payers are not a bottomless bank account for financially irresponsible councils. When NZ citizens must cut back in times of uncertainty, councils should likewise do the same. It is not ok to introduce fees, charges, fines for things which are apparently not "revenue gathering", but then complain have the council complain when the money doesn't roll in. Learn to budget like the rest of us.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

As someone that has lived in West Auckland for 6 years. The infrastructure does not support the development. We MUST look at a new transport system. Instead of a Marae in Te Atatu Peninsula. Put a Park and Ride. We have too many high density houses being built and NO carparks. We NEED better public transport options and we need it yesterday...Te Atatu Peninsula is a ONE WAY IN/ONE WAY OUT...the housing is needed, but with the increase must be better transport options available. THAT IS THE ONLY PRIORITY!

This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Far too much imprudent spending by council on fantasies, whims and "wishes". You need to ask yourselves: do I want to be seen as a wastrel and a spendthrift or as someone who contributed to Auckland as a safe, affordable, modern and liveable city? Because, at the moment, you are all simply wastrels and spendthrifts.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: I want to see council stop pandering to extremist movements with no basis in real science. Climate Change is real. The common myth that carbon dioxide is the root cause is just laughable. If carbon dioxide is so very bad, then everyone who believes this should simply stop breathing.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Other

Tell us why: The targetted rate needs to go. Once again, council are pandering to their own whims and fancies instead of developing plans based in realistic spending and a significantly lower BURDEN on ratepayers. Perhaps if you actually lost some of the people the efficiencies of the [very UN]super city, we would have some money to use addressing issues like this. In the 80's and 90's Auckland City had a targetted rate to separate storm water and sewerage systems, so why do we suddenly need this again? Oh, obviously yet another council failure...fancy that

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Other

Tell us why: You need to actually plan in a way that allows you to achieve these BASIC FUNCTIONS OF COUNCIL and to significantly lower the TAX BURDEN you so readily INFLICT on ratepayers with no concern for their standard of living. Poverty in Auckland is, in the main, a direct result of Auckland Council's incompetence and ineptitude. Failing to stick to your central tenet (protection of life and property) means you repeatedly FAIL to do your core business. Instead we have

all this fluff and bluster about "free" movies in the park, matariki, diwali, climate change "emergencies", cycle ways, bus lanes, electric buses (wtf?), "art" etc etc etc But you cannot maintain base-line assets like libraries, a reliable water supply and reliable sewerage while somehow being able to afford fleets of ebikes, thousands of "company" cars (you are not a private sector organisation), "social media", "marketing". I mean.....really? You are a council. Please do your job properly before you start even thinking about anything else: LOWER THE BURDEN YOU INFLICT UPON THE RATEPAYERS WHO YOU PURPORT TO REPRESENT.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Yes. Start doing your basics properly and fully. Start actually representing the people you purport to support. Start stewarding the council in a fiscally prudent and responsible manner. Get back to your central tenet: protection of life and property. Giv

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: Start doing your basics properly and fully. Start actually representing the people you purport to support. Start stewarding the council in a fiscally prudent and responsible manner. Get back to your central tenet: protection of life and property. Give us streets we can walk and drive down without fear of broken bones, wrecked vehicles. Give us a reliable water supply (how hard is that?). Give us reliable sewerage. Provide safe green spaces. And do ALL OF THIS while significantly lowering the UNNECESSARY TAX YOU BURDEN RATEPAYERS WITH.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why Start doing your basics properly and fully. Start actually representing the people you purport to support. Start stewarding the council in a fiscally prudent and responsible manner. Get back to your central tenet: protection of life

and property. Give us streets we can walk and drive down without fear of broken bones, wrecked vehicles. Give us a reliable water supply (how hard is that?). Give us reliable sewerage. Provide safe green spaces. And do ALL OF THIS while significantly lowering the UNNECESSARY TAX YOU BURDEN RATEPAYERS WITH.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

What is important to me? Having a council that represents me. A council that does not waste money on frivolities like the current one does. A council that is LEAN, EFFICIENT and EFFECTIVE. A council that take their responsibilities seriously. A council that is committed to significantly lowering rates by slashing wasteful spending. A council that is hell bent on significantly reducing staff numbers - what the f*** does an "executive general manager" actually do aside from steal an exorbitant salary from ratepayers?

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Rates are already too high.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremuremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremuremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

A new public school for the growing westgate and Royal Heights area.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: We are already facing the consequences of decades of under investment in infrastructure in the Te Atatu Peninsula, Henderson, Massey areas and experience frequent sewage overflows into our Awa [Henderson Creek]. In addition, right now there is a sharp rise in housing density which will put further pressure on infrastructure. Not investing in infrastructure improvements such as the waste water network and storm water networks will be very negative for our community and the well being of our whanau.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: We are already years behind where we should be in addressing climate change and we are seeing evidence of increasing impact of climate change. Pausing now could have a big impact on our futures. We must increase our efforts to address climate change, not reduce.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: We support the extension and increase in investment in Water Quality on the proviso that there is increased investment in the water quality for Te Wai o Pareira, [Henderson Creek]. This waterway has suffered decades of abuse with frequent sewage overflows which need addressing urgently. The targeted rate MUST be spent to benefit the community that has paid for it.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why: In this digital age, having community places for the community to meet face to face is even more important in my opinion. So, I am a bit concerned about the council closing physical assets such as buildings. As councils face increasing financial pressure I am seeing more and more being palmed off to the 'Community'. I am not sure of the

sustainability of this approach, as increasingly we have less and less time to devote outside trying to earn enough to pay for the mortgage. The financial pressures being felt by councils is mirrored in personal lives. Therefore, I believe that this approach is flawed and a huge load is being forced on a few to work for nothing. However, we do need to look for innovative new solutions that do work and therefore change is inevitable.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why I think citing the funding of the Waitakere Outrigger Canoe as a funding priority is misguided. This is for a very few people and funds need to be spent to benefit as broad a population base as possible. I do not support this. I support the funding for the extension of the Te Whau Pathway. This will be an asset for future generations.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

I am hugely disappointed to see mature native trees being felled by developers with impunity. The rate of increase in population density is necessary, but investment in corresponding infrastructure investment is woefully inadequate. Let's have some strong leadership here to invest wisely. The new super city is hugely process focussed and carries a

massive bureaucratic overhead. There must be a better way to increase agility but take advantages of scale. Where we are at now is very wasteful of scarce funds and instead of fixing this, investment in infrastructure is being cut.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: We are already facing the consequences of decades of under investment in infrastructure in the Te Atatu Peninsula, Henderson, Massey areas and experience frequent sewage overflows into our Awa [Henderson Creek]. In addition, right now there is a sharp rise in housing density which will put further pressure on infrastructure. Not investing in infrastructure improvements such as the waste water network and storm water networks will be very negative for our community and the well being of our whanau.

The population growth in the north-western region of Auckland City has placed intense strain on infrastructure. Wastewater from Westgate, Whenuapai, Hobsonville Point, Hobsonville, West Harbour and parts of Massey all pass under our awa (Henderson Creek) and flow along the coastal strip from Renata Esplanade, through Taipari Strand and again under the awa to The Concourse Detention Tank. Frequent overflows have occurred in this aged section of the transmission line. Essential Capital expenditure on such infrastructure should be prioritized under the Recovery Budget.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: We are already years behind where we should be in addressing climate change and we are seeing evidence of the increasing impact of climate change. Pausing now could have a big impact on our futures. We must increase our efforts to address climate change, not reduce.

Section 7.2 of the Supporting Information supplement to the 10-Year Budget 2021 – 2031 proposes three options for climate action:

1. Moderately accelerate climate action
2. Significantly accelerate climate action
3. Status Quo (do nothing)

Option 1 costs of about \$15m would be accommodated in the proposed overall 5% general 21/22 rates increase. An Option 1 Plus costs of about \$45m would require an uplift of the general 21/22 rates increase to 5.9%. Option 3 does not require any change in the general rate. Option 1 is preferred by Auckland Council.

Option 1 appears to provide only for planning and response to natural hazards. An Option 1 plus provides for physical protective works and a pilot study on 4 critical coastal landfills. The supporting document does not provide detail for a full Option 2.

The Rivercare group would support Option 1 Plus as this would help in avoiding sea water inundation of the Taipari Strand closed landfill and its subsequent effect on Te Wai O Pareira (Henderson Creek).

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: We support the extension and increase in investment in Water Quality on the proviso that there is increased investment in the water quality for Te Wai o Pareira, [Henderson Creek]. This waterway has suffered decades

of abuse with frequent sewage overflows which need addressing urgently. The targeted rate MUST be spent to benefit the community that has paid for it.

The Supporting Information supplement identifies the size and scope of the wastewater network. It identifies wastewater overflows from the network as a major issue and these overflows have significantly impacted Te Wai o Pareira, [Henderson Creek]. The proposed water quality targeted rate extension specifically includes Hobson Bay to St Heliers and the Manukau Harbour but makes no mention of the upper Waitemata Harbour. This targeted rate should be applied equally to addressing water quality issues across the whole of the region.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Unfortunately investment in climate change and watercare is far more important than these other items.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Reducing emissions is a high priority

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Environmental protection and future proofing infrastructure is important

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: I would like to see more public assets, not fewer

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

The Living Wage. The Living Wage is important to me and my household because it ensures that our lowest-paid workers and contracted workers are being paid a wage that enables them to be active citizens in our community. The Auckland Council plan is good, but the people who will be doing the hard work need to be valued and paid fairly. Auckland Council becoming an accredited employer is also important because it keeps the Council accountable to these workers who are doing the hard work.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: 1. Water supply, wastewater and stormwater. We've wasted million dollars to pay someone that who knew the water shortage in few years back but has done nothing rather than getting paid.

2. City centre and local development. Why only city centre development only? where is the regional development?

3. Council support. What is the plan to waste this money ?

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: We have so many people live in poverty and homeless. Why we can't spend more effect to fix these problems first?

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Is this meant the water bill will increase?

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: need to see the plan

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Do not support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Do not support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Auckland Council should utilise current money wisely, but realise on tax payer to pay extra every year.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

Yes

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

less rate increase

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Our cities ageing infrastructure faces the dual challenges of poor long-term maintenance and a rapidly growing population. My nearest urban waterway, Te Wai o Pareira/Henderson Creek receives frequent sewage discharges, with pathogen levels often exceeding safe levels for recreational use. The poor state of our urban waterways, the Waitemata Harbour and the Hauraki Gulf are a reflection of decades of under-investment and poor

planning. Auckland should not keep deferring addressing the regions poor water quality and infrastructure deficit. Essential Capital expenditure on infrastructure should be prioritized under the Recovery Budget.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: We are already years behind where we should be in addressing climate change and we are seeing evidence of the increasing impact of climate change. Pausing now could have a big impact on our futures. We must increase our efforts to address climate change, not reduce.

I support Option 1 plus, as it provides for physical protective works and a pilot study on 4 critical coastal landfills. The supporting document does not provide detail for a full Option 2.

Also, Option 1 Plus would help in avoiding sea water inundation of the Taipari Strand closed landfill and its subsequent effect on Te Wai O Pareira (Henderson Creek).

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: I support the extension and increase in investment in Water Quality on the proviso that there is increased investment in the water quality for Te Wai o Pareira, [Henderson Creek]. This waterway has suffered decades of abuse with frequent sewage overflows which need addressing urgently.

THE TARGETED RATE MUST BE SPENT TO THE BENEFIT OF THE COMMUNITY THAT HAS PAID IT!

The Supporting Information supplement identifies the size and scope of the wastewater network. It identifies wastewater overflows from the network as a major issue and these overflows have significantly impacted Te Wai o Pareira, [Henderson Creek]. The proposed water quality targeted rate extension specifically includes Hobson Bay to St Heliers and the Manukau Harbour but makes no mention of the upper Waitemata Harbour.

This targeted rate should be applied equally to addressing water quality issues across the whole of the region.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

The Living Wage. The Living Wage is important to me and my household because it ensures that our lowest-paid workers and contracted workers are being paid a wage that enables them to be active citizens in our community. The Auckland Council plan is good, but the people who will be doing the hard work need to be valued and paid fairly. Auckland Council becoming an accredited employer is also important because it keeps the Council accountable to these workers who are doing the hard work.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at aucklandcouncil.govt.nz/privacy and at our libraries and service centres) and with the Privacy Act 1993. We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Other
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why The completion of the Whau pathway is very important to me. A wheelchair accessible pathway that connects more of West Auckland is important for our community.

Whau Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right?

Tell us why The completion of the Whau pathway is very important to me. A wheelchair accessible pathway that connects more of West Auckland is important for our community.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at aucklandcouncil.govt.nz/privacy and at our libraries and service centres) and with the Privacy Act 1993. 10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: I am utterly dismayed over the lack of protection of trees in our neighbourhood. We have lost a 50 year old pohutukawa two doors down, another two on the berm over the road where there is in-fill housing (which the developer has not replaced), and another 100 year one round the corner. What has happened? The tuis have gone from our street. Tuis are territorial, they already have to compete with rosellas for territory, now their habitat has been annihilated. So there are now more birds competing for reduced habitat, which will cause them stress and to go hungry. "1.5 million trees planted this term" - I think that is a fools game/travesty when we should be protecting what we have and asking developers to wrap around established trees, preserving our suburban environments, for the birds, and for shade of ourselves.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why I put my support behind an initiative to connect and complete Te Whau pathway. Its completion expands on the transport options available to commuters in the area. In addition, expanding leisurely pathways generally enables the grounding of city dwellers to wider areas than their immediately surrounding neighbourhoods. Both the above link naturally to reduced vehicle usage. I speak for my family in saying we love connecting to our local people and land on the pathways. All these contribute to the civic good, so please do what is necessary to see Te Whau pathway connected and completed. Go well.

Whau Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right?

Tell us why I put my support behind an initiative to connect and complete Te Whau pathway. Its completion expands on the transport options available to commuters in the area. 10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: There are other much more important priorities that have been waiting for years that deserve funding .

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Community centers are vital. I support leasing some areas but not selling off.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why Funding is needed to complete the Te Atatu Peninsula walkway on the side fronting Henderson Creek from Rutherford College through to Taipari strand. This would not take much investment to clear back the noxious weeds and privet and unearth a lot of old tracks that have been neglected. There is also a lot of rubbish in this area and the Henderson Creek deserves to be restored. This area is so neglected and never gets any attention. Kids swim in this creek and it needs to be clean and safe.

We only have one pool in West Auckland that is continually broken, and inadequate for the population. The area needs 3-4 more pools.

A light rail option and busway from the West along the Northwestern just seems to have been forgotten about. this is vital. Public transport in this area needs a big boost.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

We only have one pool in West Auckland that is continually broken, and inadequate for the population. The area needs 3-4 more pools.

A light rail option and busway from the West along the Northwestern just seems to have been forgotten about. this is vital. Public transport in this area needs a big boost.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: We need much more investment to protect our environment and water infrastructure, which are key to making Auckland a liveable city. With the housing intensification in North/West Auckland, we need urgent improvements in services - water, parks, transport, recreation.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Climate change is already having an impact on our lives now, with draughts and extreme weather events. We need to future-proof our city and environment, and we need to do our best to not continue to contribute to climate change. Real investment in public and active transport now!

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Yes I support the increase, for reasons covered in 1 and 2, but I want the rate to be applied equitably across the city, including the North West, protecting Te Wai O Parrots / Henderson Creek and the Whau river

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Community facilities need to be activated and not left to languish. Support local arts, youth and community initiatives, which are inexpensive to fund. Then we will get the most out of those buildings! A growing population with super diversity does need help to build cohesion and a sense of belonging - invest in communities to avoid facing fallout and damage down the road

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Those rates questions are complex and I have not seen any discussion on it. Unfair to expect the public to make a decision on this. I hope my elected representatives can make these decisions, guided by the values of fairness and equity, sustainability and

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Active and public transport, parks, community facilities WITH activation, events, parks, libraries, bringing people together, protecting the environment and our water, connecting with tangata whenua and honouring the Treaty

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: As stated above, the \$1M dollar deficit is merely projected. If rates were to increase, they are unlikely to come back down and numerous residents within the Auckland region will be dealing with their own recovery from changes due to covid.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: I would much prefer that incentives for the purchase of personal electric vehicles were factored in, or highly subsidised public transport.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: Happy to pay for this for a bit longer, but do not support annual increases as these are likely to be unrestrained i.e. too costly

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: It makes sense to better utilise facilities by having multi-use areas. The use of online can make services more widely available.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Do not support the Vector increase as this will just increase electrical charges to Vector customers. Instead there could be a way to incentivise undergrounding of power lines in areas where trees are a problem.

The Upper Harbour Local Board are proposing a new bus service between Paremoro and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoro and Lucas Heights area of the Upper Harbour Local Board

Tell us why: The bus service will develop the whole area and could be used by people outside the 500 m zone.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why For goodness sake, when will someone do something about Henderson town center, which is absolutely atrocious? Moreover, the Corban's Estate would be a fantastic redevelopment opportunity, especially since the activities in this area are not widely advertised and appear to be available to only a limited number/cliq of people.

Saying things like 'progress actions' and 'investigate options' really does not give us any tangible outcomes. While I support progressing aquatic facilities in Northwest, I do not see that progressing a permanent facility for Waitākere Outrigger Canoe (Waka Ama) Club in Te Atatū South will benefit a wide range of people.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

I'd be interested to know why taxpayer money was used to get Rod Stewart to do the singalong at the end of the America's cup when there could have been a suitable candidate within New Zealand and who would also be contributing to the NZ economy.

To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why The Te Whau walkway will relieve many of road congestion and bring great sense of community

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: 3.5% is the rate it should be kept at. Auckland council will have to control their spending. It is not the rate payers fault for the pandemic..

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: Climate change is a misnomer. The earth has gone through cycles of various changes throughout its lifespan. Our little island will not make that much difference in the scheme of things when you compare us to the USA or China.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: The increase should not have to be targeted on the rate payer. Any business must have the Infrastructure to deal with renewal costs. Why should the cost be linked to the rates?

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Multi use facilities of council amenities is the best way of getting use out of these community environments.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: Why should certain householders/businesses pay more for this service just because they are located with 500m walking distance of the bus stop? They will probably not even use the service.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why The priorities seem to be very limited to 'ideals' rather than priorities that will benefit all of the community.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Housing: affordable? you must be joking!

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: Ok for one-off rate increase but investment should concentrate on urgent and important economy issues facing by businesses and individual who contribute to the economy and mobilise jobless and homeless people to contribute and rebuild economy. Should abolish welfare benefit and as what we observe from benefits receivers are mostly enjoying good life with money they did not earn for and we tax payers works so hard to make ends needs here are suffering compared to them. Economy should rewards the contributors and penalise people who doesn't care about

economy growth of a country and even make it worse by involving in unnecessary activities that worsen crime rate and raise safety concern of general public who are just trying to live a life here! What message does the government sent to general public. Wasting so much financial resources on people who does not contribute to rebuild the economy. We might be at a juncture now to reconsider how social system should work by rewarding the right target groups who deserve it.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: please spend money on utmost urgent matter that only threaten human's livelihood now. What is the proportion of people taking buses vs people who drive. Which one give our country more impact if we apply intervention on it? Is our buses run too frequently eventhough the demand is not quite there? Response based on areas in higher demand may only make investment worth it.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Consider increasing rate only on local residence only and not for all Aucklanders who does not impacted by the affected areas

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Considering the country's economy difficulties right now, isn't this not really a priority yet until there is a surplus in the financial account? Spend money on critical economy rebuilding areas. Necessities not luxury

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

no

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why Spend on creating more job and upgrade city look and safe environment and not on things that doesn't have good ROI.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

How many of the proposed spending items contribute to our Auckland vision of a supercity or world's food capital?
Please spend on high ROI areas to have strong financial foundation, before indulging into other good to have items.
Take Auckland to its next level, what do we want to be well-known for and what will others feel attracted to Auckland about?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: 5% too high!

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: You have not indicated any cost reduction measures. The Auckland water debacle shows you are receiving erroneous advice from people which you are paying far too much for. Divest yourself from an interest in ports of Auckland and that should assist with any short fall precipitated by Covid-19

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: You are dragging the chain on sustainability management and the cost saving and environmental protection that will result

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: You should be delaying this in light of your budget blowout and introduce an intermediary step of ratepayer education and awareness. Before the works you propose.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Leasing only exposes you to higher cost and vulnerability in the long term. Reduce these assets and consolidate to cut costs.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Do not support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Do not support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Do not support

Do you have any comments on any of our proposed changes to rates and fees charges?

Any further works and development in this area should be stopped and the status quo maintained in light of your poor contingency for the pandemic and its impact on your ability to provide services we have been paying rates for

The Upper Harbour Local Board are proposing a new bus service between Paremoro and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: Stop proposed additional spending and development of your services. It is fine for consolidation and asset selling not expenditure

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why I have not seen improvements in transport infrastructure so I think land and real estate development should be delayed for 5-20 years in light of the pandemic

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Delay all non essential spending and investment. Look at maintaining and improving current streamlined services and reduce staffing levels and investment in inner city real estate for your council staff and buildings. Move out of the city.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: There are other ways of gathering this revenue without targeting the Aucklanders who only own home. Sure there are people who have multiple homes and can afford. But there is also first time home owners on average incomes with young families trying to get a head. This does not help us this only burdens us. Also this 5% won't be decreased in the year after rates which will be even higher rates. On top of it our cvs are all going up to some ridiculous amount that no doubt we are going to be charged for.

You can not just put this on the home owners. All Aucklanders benefit all Aucklanders need to share the bill.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: I think a lot of climate change needs to come from central government. Taxing companies for their packaging that will have a long term impact to our planet. Even so we don't recycle here it just piles up. We need to learn as a country to reduce and reuse. More needs to spent of education in schools and community's changing mind sets.

As for buses. It sounds all grand but our public transport is way too expensive as it is. Too infrequent and un reliable.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: I support looking after our waterways 100% but once again it shouldn't be only the rates payer fitting this bill.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why Auckland has a whole heap of issues that need to be addressed but charging some people and not others is not fair.

We have all made the mess we should all pitch in to fix it

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Minimise developments in certain areas. We brought our house two years ago. On average we get three letters a week from real estate agents, letters from developers and at least once if not twice a month we have them walking to our door to make an offer to sell.

We are getting pushed from our own homes and it isn't right. Once we have one person give in to a developer on this street they will all sell up like dominos. We shouldn't be heckled so much to selling our homes. It's a stress every time someone is putting a sale sign up on our street.

There are streets already in our area with rows of ugly new small box house developments no one wants to live next to them. They take up all the street parking.

It should be two or three houses max on a property not six.

Te Atatu péninsula is a one way in and one way out. In the past five years the congestion on here has gotten so much worse. It actually delegates when you can leave your home and when you can't cause of the traffic issues.

Stop the mass developments here

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: If global warming turns out to be a natural evolution of or planet then who will be held responsible?

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

Henderson-Massey Local Board

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: We need to take action now to ensure we have the resources available

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: It's a great idea to reduce the number of diesel vehicles on the road, and planting trees is always good.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: Providing clean water should be a priority, Aucklanders are already paying too much for this basic necessity, and to increase rates for this is not fair.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: They can be done over a period of years, it's best to use the money on the more urgent things like water and transport.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why: It's only fair that people in the area who benefit from this service should pay for it.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why The area is growing rapidly and we need to ensure that we have the same facilities as other areas.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Housing - there are too many developments being undertaken in the area which are producing undesirable little box housing, this will attract more low income people and change the dynamic of the area, which has always been great for families. A greater number of rental properties also attracts the wrong sort of people, and will only require more police to manage the fallout.

This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: I appreciate how much work and effort goes into these and this is particularly challenging in current times. I generally support the proposal but the main reason I have ticked don't support is because I think council should go harder on capital investment now when borrowing is cheap and push harder on transport infrastructure. Previous rate payers and councils have deferred what was need for too long and we are suffering for it. We need a huge leap and it will

just keep getting harder and worse. In terms of open and one off increase I'm ok with. It's the capex aspects I think we need to go harder on and stretch the debt to income for an extended period.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: I support the proposed budget although I would like to see greater investment in climate change action. Climate action is not something we can defer until later - the time to act is now and the investment needs to be greater than proposed.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: I support greater investment in responding to climate change. The level of climate change-related investment in the proposed 10 year budget is not ambitious enough. Less than 0.5% of the 10 year budget is dedicated to climate change efforts. I am disappointed that councillors voted for the least ambitious option presented to them. I would like to see councillors get behind the more ambitious option that was originally proposed. The time to act on climate change is now, not later. For example, transport is Auckland's largest source of climate emissions and more ambitious investment is needed in accessible public transport, safe cycleways and safe footpaths. Investments such as funding the completion of the Te Whau Pathway are vital to enable Aucklanders to choose viable alternatives to travelling by car.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Investment in better water quality for streams, beaches and harbours is very important. Infrastructure costs more the longer investment is deferred. The time to act is now.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

I do not support the 6% increase for venue hire fees. This is not realistic for community groups that use council venues. Current fees are already a barrier for community groups, which results in perverse situations where community groups are applying for

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why I particularly support the Henderson-Massey Local Board's initiative to develop and implement a community-led Climate Action Plan to lower Henderson-Massey's carbon footprint, and also the board's advocacy on several local active transport initiatives to reduce reliance on cars. For example, the Te Whau Pathway is funded in the Henderson-Massey Local Board area, but still needs funding support to be fully completed in other areas. I support the Henderson-Massey Local Board's proposal to restore the Local Board Transport Capital Fund, which was substantially reduced as part of the council's Emergency Budget 2020/2021. This would enable the Henderson-Massey Local Board to deliver projects that increase the local walking and cycling network.

Hibiscus and Bays Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right?

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

I do not support the 6% increase for venue hire fees. This is not realistic for community groups that use council venues. Current fees are already a barrier for community groups, which results in perverse situations where community groups are applying for funding from other parts of council to pay for council venue costs. If council is providing venues as a community service then these venues need to be accessible to the community.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: 1. Rates increases have been held artificially low for the life of Auckland Council. This has left us in a poor structural position, relying too much on dividends. Returning to 3.5% after only 1 year will continue the structural problems.

2. Auckland Council is proportionally paying far too much for the CRL. Covid gave Council an excellent opportunity to go back to Central Govt. and redress the balance so that we can pay the appropriate share (about 25 -30%). A strong leader would have already taken this opportunity. A weak manager accepts the status quo.

3. The proposal to pour \$500 mil into central auckland mayoral pet projects, so the Mayor can have ribbon cutting photo opps, while the suburbs are being degraded is disgusting. Central Auckland is already getting the \$800 mil. central interceptor to fix up an issue they steadfastly refused to fund during Auckland City Council's existence. Now other former council areas are being neglected to fund this. Then AC has the temerity to pour more suburban money into fancy downtown projects for the rich. Disgraceful.

4. The process for deciding what to do with Community Assets needs to be removed from Panuku and other downtown based officers. Complete lack of knowledge of communities, inability to conduct meaningful consultation (notably a feature of this LTP), lack of understanding of the whenua and a single focus on getting money (even if undervalued) are a feature of AC's outcomes so far. The whole process needs to be shifted entirely to Local Boards, who need full funding to undertake the required consultation. This should not be used as a quick fix, cash cow. Community assets need to be enhanced and added to, not sold off, as the AUP makes these far more needed as density is being increased. Therefore this should be a net cost to Council, not a source of funds. If this is not the case then there is a problem.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: The LTP and Council policies in general are too, too weak on climate change. Every policy should be costed for climate change net effects. A massive upfront investment should be on the books. The budget balancing tool shows this is easily possible by reducing investment in roads, and also as above by rebalancing the CRL to be more funded by Central Govt., and not spending ridiculous amounts of money on downtown.

Way underfunded, way too slow.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: This is a major requirement, as stormwater is one of the most underfunded areas of Council. However, this money should have been coming from general rates, not special top up rates. Stop the fake accounting tricks and be honest about costs.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: The proper process needs to be in place before anything can be done in this area. Rates should increase to better fund community assets and obtain new assets. This is necessary due to the AUP over densifying areas and leaving homes with no real open space. There a massive increase in community open space and assets is needed.

The process for deciding what to do with Community Assets needs to be removed from Panuku and other downtown based officers. Complete lack of knowledge of communities, inability to conduct meaningful consultation (notably a feature of this LTP), lack of understanding of the whenua and a single focus on getting money (even if undervalued) are a feature of AC's outcomes so far. The whole process needs to be shifted entirely to Local Boards, who need full funding to undertake the required consultation. This should not be used as a quick fix, cash cow. Community assets need to be enhanced and added to, not sold off, as the AUP makes these far more needed as density is being increased. Therefore this should be a net cost to Council, not a source of funds. If this is not the case then there is a problem.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Other
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Vector rate. How ridiculous. This just looks like AC is coming up with creative excuses to charge rates. Vector should just trim the trees themselves, and get on with undergrounding. AC should also seek to fix the crazy situation whereby less well off

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: It's not a Local Boards responsibility to fund bus services. If there is reasonable demand, AT should be providing these services. Stop coming up with crazy targeted rates.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why Aquatic provision in West Auckland needs to be sorted ASAP. It is going the same way as the busway. Multi millions being spent on north shore, nothing in West Auckland. LB must be in control on community assets.

I also note that ATAP almost completely ignores West Auckland. LB should be demanding more Council offices in West Auckland. The closure of Henderson Admin building is resulting in stupid decisions being made by central auckland bureaucrats with absolutely no knowledge of the area. Once Henderson closes, west auckland employees will not travel to Albany (NW Hub) and there will be no one working on the area who lives in the area. This will be like the endless battle to get services into Waitakere Hospital. LB must demand more work be put into WA. This should have been part of the Western Initiative, however this appears to have been yet another long forgotten talkfest used as a throwaway to pacify WA.

The degradation of assets under AC is disgraceful. As examples in my immediate area, 1. road reseal has only partially be completed, 2. footpaths have exploded but nothing done, 3. potholes very poorly repaired as a stopgap only (minimal cost, cracking surrounding it still so will re-fail soon enough), 4. fence put up in Cranwell park due to a slip behind the playcentre has been in place for at least two years - no sign of any repair, very poor state of the cycleway and failing retaining walls, have been 'repaired' with spraypaint and signs (apparently after about five years this is finally being addressed). These are all just signs of the underinvestment in west auckland, and all the while we have to hear the mayor talk about downtown stadiums, and money being spent downtown, while WA assets are being sold off. West Auckland is being abandoned. Stop stealing from the less well off to pamper this rich in downtown.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Please stop AT putting speed bumps on arterial roads.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Waitākere Ranges Local Board

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: An increase of 5% for rates is putting too much pressure on us. You talk about recovery but it is individuals and families who are hurting the most financially, I don't think taking more money helps us. Everything is going up in cost, the government is meant to help not add more pressure. You talk of speeding up Auckland's recovery, that makes no sense. The entire world is still shaking and our borders are closed.

You get a lot of income and with the massive increase in homes built you by default have had extra income. I struggle to understand what you do with the income. I don't agree with you borrowing money and then cutting costs. A cutting cost exercise is usually targeted in the wrong place. I'm not ok with any of this.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: Hydrogen is a huge cost, you need to research this more.

I think there needs to be more charging stations around for electric cars and put these charging stations on solar power to reduce council costs, eg rate payer costs.

You need to encourage big business to move their headquarters out of the city to other areas, eg Henderson, Northwest where there is space. This will reduce car emissions by virtue of less people all needing to travel to the city at the same time. All those poor people paying more and more just to go to work and the amount of time they are missing out to be able to enjoy their lives. For those who catch the train, the number of times its out of action is frustrating and you need to put in double storey car parks at park n ride, there is no where near enough parking. And the cost has just increased by \$10 a week for sitting on the train for two hours a day and then getting very wet when walking to and from work. The increased cost is a lot of added pressure. And come into line with other countries and have express trains. Half the line is non stop and this is alternated. Again you will be allowing people more time and energy to enjoy their lives and hard work. Probably reduce absence from work too. And maybe if the trip is only 20 minutes more people would catch the train.

You need a train to the Northshore and Albany and Northwest too. The buses are too slow.

And planning to plant more trees is great.

Please change the paths in Henderson. They are sooo narrow, only really fit one person and a child. But they're right next to the road and people in cars are selfish, they drive so close its just not safe. The little grass area between the path and road needs to come back and the trees be planted in the little grass section. I think it's called a herb. And put in the large bike/people paths. Make walking and riding more of an opportunity and option for people, not just cars. And this just makes the area look a lot nicer. Everyone knows the nice areas have nice paths. Make everywhere nicer.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: You really need to look at your management practices. You had a goal which rate payers are already funding to 2028. Now you want more time and more money. Not cool. I highly question the ability of those people who are making these decisions. There are so many other quick wins you could get here.

Such as teaching people via social media platforms and advertising and in schools that littering is hurting our flora and fauna and marine life. Encourage people to volunteer to help clean up our oceans. There are organizations who need more volunteers for this. Really highlight how we impact our environment.

When I drive to work in the morning I watch so many students drop their rubbish on the ground and this goes into our waterways. I cleared up a tonne of rubbish from the creek next my house and got very sick too. I needed a 9 meter skip and there's more rubbish in there. My neighbors don't care. You need to educate people more. Everyone needs to help. And maybe you should be a world first and develop electric yachts and fishing boats, I'm sure that would help our oceans a lot too.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Other

Tell us why: You need to weigh up the cost of sharing facilities. Is a \$15000 a week rental really going to be cheaper? Plus any internal changes are a rate payer cost again.

You need to research this more.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: I am not going to pay another fee for something I don't use.

I'm so tired of being asked for money literally everywhere I go.

I'm a widow with 4 children and I have to pay for everything. I struggle every single week to buy enough food and school shoes. I'm really over it.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

Yes

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? Other

Tell us why The massey- Henderson board are at odds with the Auckland regional plan. If you have different goals how will anything be achieved.

Henderson is not safe, and it is not welcoming.

And in 20 years Henderson has not had any real improvements made to how it looks. Henderson needs a major facelift and upgrade.

My sons want to walk through the park to get home, along with many other kids. But when they do, they are bullied. I've had to tell them to walk along the main road for their safety. They're 11 and 13 and small. Henderson has way too many who are angry bullies.

You need to invest more on educating people to have better behavior.

Henderson has way too many men who are sitting in doorways to Shops asking for money. They are already supported by the government, its not ok.

New Zealand needs to go cashless.

I can tell you the number of people who are working for cash is very high.

The government and the country would get a big boost in revenue if cash was removed.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

I would like to see bigger paths for bikes and people all around Henderson. I would like berbs reintroduced and trees planted. The tiny paths are at the road edge and the cars are too close. It's so dangerous with children.

I would like a platform bump in between the universal drive and Metcalf road roadabouts. This is a tiny stretch of road but for some reason the cars speed up through this bit. There has been multiple crashes into power poles along here. I'm always nervous pulling out my driveway.

I would like to see in Henderson town all the shop buildings be the same and have beautiful apartments above. Hobsonville has done this and it's beautiful. Henderson could be like this too.

I would like the courts moved out of Henderson town. Watching shirtless men attack and bully others in the middle of Ratanui Street is awful. Bringing criminals in the middle of the town is horrible. I witnessed the attack outside the train station and some poor school child was threatened with a machete in the middle of the street. Henderson is not safe.

Move the courts. Upgrade Henderson. Have more luxury apartments and encourage more cafes. Make Westcity bigger and get more choices of shops and encourage all those who left to come back.

Educate people about littering and how it affects our planet. Educate people that they live in a community, they are not the only person and to have better behavior.

Get more big business out in Henderson so people don't have to travel into the city, thereby cutting carbon emissions.

There's a lot that could be done and needs to be done that could be some quick wins for you.

I have not seen any improvement to Henderson and it is for that reason and my own ability to afford that I am not supporting the council asking for more money again.

I supported everything in the last 10 year plan. But Henderson looks terrible. I want to be able to and have my children walk safely

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Stop wasting our money on non core options first. Dear Councillors,

This is a submission on the Council's 10-Year Budget, Long Term Plan ("LTP").

I submit that the proposed 5 percent rates hike is unacceptable.

While Council faces revenue pressures, this is simply a result of the economic environment facing all Aucklanders. Ratepayers facing job losses, reduced hours, and the pressures of rolling lockdowns should not be burdened by higher rates hikes.

In addition, the proposed increases to water charges are significant, and could be avoided if capital from Council assets, such as Auckland International Airport and Ports of Auckland, was reinvested in improvements to water infrastructure. Reductions in operational spending, such as that spent on tourism and economic development, should be cut, particularly that which is duplicated by central government.

Both rates and water measures will hit my pocket, and the pockets of Aucklanders who can least afford it.

As a ratepayer, I submit that instead of coming up with ways to charge me more, the Council should focus on providing value for money, delivering core services and doing more with less, especially given the impacts of Covid-19.

I support the submissions made by the Auckland Ratepayers' Alliance, available at http://www.ratepayers.org.nz/2021_ltp_submission.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: Not as important as essential infrastructure. An ideology we can't afford immediately

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Incompetent management

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Libraries and parks first others when we are solvent

5. Rating policy

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Nz biggest city needs to be developed and grow with the times and Auckland's population.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: More trees produce more oxygen, replacing fossil fuel driven vehicles compliments the contribution of the increase in trees. This will improve air quality and in return quality of your health.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: If the project is now extended to a bigger area more funds will be required to see the project through effectively and on time.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: I trust the people who are making these decisions.

5. Rating policy

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Increase revenue and reduce expenditure, the most important is reduce expenditure.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: Do what you are doing, not what you are doing

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Reduce executive costs and salaries, rather than charging citizens more

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Unnecessary expenses should be cut down

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Global economy inflation coupled with increasingly concerning global climate change, if the economy continue to down turn, long term risk is more likely. Due to the inflation, capital values will also inflate. This problem will get worse further if you delay your action. If the selling of unused property could meet the long term development plan for the region, it is better that the action may generate bigger economic profits. 全球经济通胀 · 气候变化问题日益严峻 · 如果

经济持续疲软，将会带来更长期的风险。随着通胀，各方面的资本也会大幅度增加。估计问题会一拖再拖持续恶化。出售闲置房产如果能符合区域长远发展规划，产生更大的经济效益就更好。

What is your opinion on this proposal? Support

Tell us why: The utilization rate of community centers is currently low. Most activities are council-led activities being held there. Why not let private NGOs take the lead and turn the places into a recreational area for cultural and creative activities (cultural and creative centers) or open to kids educational institutions for them to rent as classrooms for teaching. At present, the many educational institutions in New Zealand are extremely scattered. If they can be concentrated in the same building or community, it will be convenient for parents to pick up the children and arrange their

schedule. The rent can also be used for the daily management and maintenance of the building.公共社区中心目前利用率低，大多数以政府牵头的活动才会利用上，为何不让民间的NGO 牵头，把这个地方打造成文艺活动休闲区（文创中心）或者开放让各大儿童教育机构承租相应的课室用于教学。目前新西兰各大教育机构极其分散，如果能集中在同一栋大楼或者社区，也方便家长接送和安排。租金也可以用于大楼的日常管理和维修保养。

5. Rating policy

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

Franklin Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

we do not have a bus directly (Massey) to Auckland Central. If we could have a bus station around Hewlett road, Massey, it would be great

This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Work within your budget, like the rest of us... not more borrowing at ratepayers' expense (5% rate increase). Make those already paid (a lot) in council accountable for their expenditure. Cannot keep taxing citizens. Already high rates... for diminished services & ridiculous shortfalls like a water shortage?? People are already paid (a lot) to forecast, manage & budget for all these essential services. Council's poor budgeting, lack of accountability & management in the past needs to be addressed, not simply; oh we have problems, let's tax the people more. Changing numbers in

population etc is not new. Council are paid to manage infrastructure; you approve building permits, maintain current infrastructure etc; not good enough to say it's a new problem & taxpayers wear the cost. Again. Trim the budget. Spend OUR money on only ESSENTIAL services & infrastructure, not already wealthy businesses (for example, America's Cup) with dubious, unproven benefits to the whole community, (COVID or not). Work within your budget.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: As above, work within the current budget

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: Another rate to address a problem that has been evident for ages/years/ decades? Where's the council's plan from a decade ago to address this problem? This is not a new problem. It is not fair to load the taxpayer with something you should have been managing already... within your budget.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Support sharing facilities but this is just propaganda - for in the end, further reducing community services. And again, no more increased taxing of ratepayers. Work within your budget. These are not new problems.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: This is a tax for a bus service? Different from a new tunnel or improved road system. Unfair to tax all local people for a public bus service ... they might not use it?!

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why What is the job of community boards? Essential services that build community.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at aucklandcouncil.govt.nz/privacy and at our libraries and service centres) and with the Privacy Act 1993. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: There does not appear to be any real effort by the council to cut their costs to align with their expenditure. In the "real" world the impacts of covid were addressed by business by cutting their costs and services so not to go bankrupt. This was a reality that had to be faced. Many times we have heard that public servants have to be paid at a level with the private sector. Especially when it comes to senior management. But it is forgotten that at times like covid these people have to earn their money and keep their respective businesses afloat. I don't believe that the council

actually has a problem with their budget, the problem is that they want to maintain expenditure without any compromise on service. The reality is that they can't. The solution is very simple, extremely simple. Give the respective council ceo's and cfo's budgets based on the councils income (without any rates increases) and tell them to justify their existence and get on with it. Either cut costs and maintain services or reduce expenditure and services in accordance with their budgets. Do what EVERY other CEO/CFO in business has had to do in the last 12 months. Earn the money they been paid and get on with. It's not rocket science and they are not special - do their jobs or stand aside and let somebody who can do it have a go. Harden up and grow some balls

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: If Auckland Transport made their primary focus the efficient movement of traffic throughout the region this would accomplish much more in fuel savings and reducing carbon emissions. Replacing a few poorly patronised buses to the airport is a cost that cannot be justified. It is a feel good project that will achieve very little. Unfortunately the culture of at AT is so firmly ingrained that I think they are now so incompetent that they could not deliver efficiencies in traffic movement around the city. I suggest that if they all actually did nothing at all for 6 months, no body would notice any difference.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Ratepayers have been paying for years and the money has been wasted on other projects. The council should be EMBARRASSED to even ask for a targeted rate, it is a surrender by them and an admission of their previous incompetence. Cut the crap and do the jobs you've been paid to do. Stop siphoning off money on your other pet projects and concentrate on your core responsibilities

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Read above. You've been paid for the upkeep of infrastructure but you haven't spent the money where it was supposed to be spent. Stop whinging now because you've got no money left. Work with the budgets you have, and cut out your costs and provide the service that your budget allows for. Simple simple simple

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Whau Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Stay out of it. It is not the councils problem to address. Housing will be solved by the individuals directly affected and by the governments initiatives. The councils only impact should be to deliver services as cheaply and efficiently as possible so that building can be progressed without bureaucratic delays. Council charges for new builds are an absolute joke and I don't know how they can keep a straight face pretending to show concern on this issue. Auckland Council is fundamentally part of the problem, not part of the solution. Bunch of muppets!

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Stick to your word Auckland is growing at a fanominal rate one would have thought the council would have been onto water, infrastructure etc years ago.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Yes we all need to play a big part in this but the council must drive it

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at aucklandcouncil.govt.nz/privacy and at our libraries and service centres) and with the Privacy Act 1993. Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: I approve of the increase to wastewater treatment and emission reductions. I think the increased rates will pay off in the long run.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: It's expensive, smelly and loud to have diesel buses. Electric works well in Wellington.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Water is a treasure. We have a responsibility to look after it for the generations to come.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why: I would want to know more about which services would be cut.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The fact that it's 2021 and we still have power cuts in the city because someone didn't trim a tree is ridiculous. I support increased funding to improve electricity reliability but I also think a impartial review into to the quality of current work.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: While financially the increase in rates is going to be challenging for me and my husband, I understand the need for investment - it does mean though that we will have to curtail our spending within the local economy because of the increase. Our wages certainly have not increased and in fact my husband's income was reduced due to COVID.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: I do support an increase but not as much as has been allowed. I feel there are higher priorities within Auckland that rates should be targeting

Will the spend on buses mean public transport costs increase? It is too expensive as it is and the new routes that were introduced are just ridiculous.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: I believe that beaches should be safe to swim at and it is terrible that we have to check that they are safe and not contaminated - I hope that the extra money for this means that in the long term we actually see an improvement

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Other

Tell us why: I do not support facilities being closed down - the closure of animal protection shelters really angered me as I can see the need for this within the community - yet you are proposing to cut more facilities and combine them? You do not give enough information about how you would do this. It is hard enough to visit community facilities at the moment, with closing some down it is going to be harder for people to access services and facilities and I do not understand the theory behind that. How are you going to then improve access?

What about the Corbans art estate area - that could be turned into something so much better than what it is, it is under utilised and under developed - huge part of the community that could be made more attractive

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why Waitākere Outrigger Canoe (Waka Ama) Club in Te Atatū South - how much of the money will be going into this and what evidence is there that this is actually going to benefit the local community? I don't really think that this is a high priority personally - I believe that the priority should be on Henderson main street and town centre. It desperately needs revitalising.

Other focus points listed:

1. ensure community spaces cater for our diverse communities and are accessible and welcoming places - I refer again to Corbans estate - under utilised, such a great space to develop and make a really great community hub
2. enhance a sense of belonging and safety in our town centres and community spaces - Henderson town centre needs to be addressed. I do not feel safe as a female walking around this area, even driving I will lock my doors when going through the area. More money needs to be spent on this area. We need more cafes and better shops but it needs money spent on it to bring it up.

3. continue providing quality parks and playgrounds, libraries, community and recreation facilities, and events - this contradicts what you are saying in that you are talking about consolidating and closing facilities so how are you going to continue to provide these facilities when you are planning on shutting them down? That makes no sense

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

I see so much housing development occurring within Te Atatu South and surrounding areas but no money being spent on roads. It is such a contradiction - you consent to these developments but we don't have the infrastructure to support such large developments. This is also relevant across Auckland. Some of these new developments don't have car parks which means people park on the road which means there is congestion and it is hard and unsafe to pull out of driveways. And the argument that people should be using public transport is not valid - the local buses that I could walk 10 minutes to, don't even go to the places they should. And the cost of public transport is more than taking a car so what is the point! The new routes make no sense - you are forcing people into their cars by making the routes longer and inefficient - if I want to go to New Lynn from McLeod Road in Te atatu, I have to catch a bus into Henderson and then a bus from there to New Lynn - this makes no sense when Te atatu road, runs into Great North Road and it is straight through to New Lynn. I know this issue has also affected people in South Auckland as my in-laws now can't catch the bus.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: But stop poisoning the water with fluoride

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Leave the libraries

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why The only 1 one I support is: continue providing quality parks and playgrounds, libraries, community and recreation facilities, and events.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

I don't support any of the new housing proposals. You are ruining Auckland with mass small box housing.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: We are already facing the consequences of decades of under investment in infrastructure in the Te Atatu Peninsula, Henderson, Massey areas and experience frequent sewage overflows into our Awa [Henderson Creek]. In addition, right now there is a sharp rise in housing density which will put further pressure on infrastructure. Not investing in infrastructure improvements such as the waste water network and storm water networks will be very negative for our community and the well being of our whanau.

The population growth in the north-western region of Auckland City has placed intense strain on infrastructure. Wastewater from Westgate, Whenuapai, Hobsonville Point, Hobsonville, West Harbour and parts of Massey all pass under our awa (Henderson Creek) and flow along the coastal strip from Renata Esplanade, through Taipari Strand and again under the awa to The Concourse Detention Tank. Frequent overflows have occurred in this aged section of the transmission line. Essential Capital expenditure on such infrastructure should be prioritized under the Recovery Budget.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: We are already years behind where we should be in addressing climate change and we are seeing evidence of the increasing impact of climate change. Pausing now could have a big impact on our futures. We must increase our efforts to address climate change, not reduce.

Section 7.2 of the Supporting Information supplement to the 10-Year Budget 2021 – 2031 proposes three options for climate action:

1. Moderately accelerate climate action
2. Significantly accelerate climate action
3. Status Quo (do nothing)

Option 1 costs of about \$15m would be accommodated in the proposed overall 5% general 21/22 rates increase. An Option 1 Plus costs of about \$45m would require an uplift of the general 21/22 rates increase to 5.9%. Option 3 does not require any change in the general rate. Option 1 is preferred by Auckland Council.

Option 1 appears to provide only for planning and response to natural hazards. An Option 1 plus provides for physical protective works and a pilot study on 4 critical coastal landfills. The supporting document does not provide detail for a full Option 2.

The Rivercare group would support Option 1 Plus as this would help in avoiding sea water inundation of the Taipari Strand closed landfill and its subsequent effect on Te Wai O Pareira (Henderson Creek).

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: We support the extension and increase in investment in Water Quality on the proviso that there is increased investment in the water quality for Te Wai o Pareira, [Henderson Creek]. This waterway has suffered decades of abuse with frequent sewage overflows which need addressing urgently. The targeted rate MUST be spent to benefit the community that has paid for it.

The Supporting Information supplement identifies the size and scope of the wastewater network. It identifies wastewater overflows from the network as a major issue and these overflows have significantly impacted Te Wai o Pareira, [Henderson Creek]. The proposed water quality targeted rate extension specifically includes Hobson Bay to St Heliers and the Manukau Harbour but makes no mention of the upper Waitemata Harbour. This targeted rate should be applied equally to addressing water quality issues across the whole of the region.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: In general I support the increase. However, as a resident in West Auckland, I wish to see evidence of our targeted rates and development contributions being spent in our local community due to the chaotic intensification taking place in our area. Essential Capital expenditure on such infrastructure should be prioritized under the Recovery Budget..

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: Happy to support increased investment in the Climate Change Plan as long as a proportionate amount of rates are invested in West Auckland. I support the submission by Rivercare Group Te Wai o Pareira.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: We support the extension and increase in investment in Water Quality on the proviso that there is increased investment in the water quality for Te Wai o Pareira, [Henderson Creek]. This waterway has suffered decades of abuse with frequent sewage overflows which need addressing urgently. The targeted rate MUST be spent to benefit the community that has paid for it.

The Supporting Information supplement identifies the size and scope of the wastewater network. It identifies wastewater overflows from the network as a major issue and these overflows have significantly impacted Te Wai o Pareira, [Henderson Creek]. The proposed water quality targeted rate extension specifically includes Hobson Bay to St Heliers and the Manukau Harbour but makes no mention of the upper Waitemata Harbour. This targeted rate should be applied equally to addressing water quality issues across the whole of the region.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

We are living the the unsettling effects of intensification. Significant investment is required to address critical infrastructure - sewage, storm-water and public transport

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Rates can't keep going up households can't sustain the ongoing increases 5% rates increase is ridiculous! Higher rates and debt is something that should not be the burden of rate payers. Why are home owners bearing the burden of these costs when renters don't contribute anything financially yet have the same services that rate payers have??

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Increasing to electric has its plus side of things. However the use of power will skyrocket as these things are being charged so how is council getting a better deal for power?? Also how are these cells going to be disposed of without going to landfill has someone thought of how this will be done and the costs associated around this??

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Central government should be driving this not rate payers. This is not a local issue to have put on residents.. for example will my rates target payment be for my area solely or is it a pool fund that just gets used elsewhere?? The areas of concern aren't even in my local area and I've never in my 40years gone to any other area where there is a problem I do not support this on any accord!

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Communities know what they need and want. Council needs to not make things a bureaucratic nightmare. Businesses' need to be kept out of these changes too so not to impede the community need against the corporate needs to make money.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Introducing the Electricity Network Resilience Targeted Rate

Disagree with the above as Vector will on pass on these charges to consumers.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: 500m of a bus stop is a WIDE range from an address this is an unfair way to look at it and charge rate payers. Plus many people in the area do NOT catch the bus so should not be lumped with paying for a service they will NEVER use.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

Yes

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why Good initiatives however why is the Governance budget almost 9million for 1 year that seems excessively HIGH! There isn't much that's in the priorities and other boards have more and don't have a budget that BIG!!

Upper Harbour Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why Why buy Hobsonville Bomb Point if council are divesting their portfolio??

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

That community facilities are upgraded and refreshed.

Public toilets in parks and town centres are upgraded and maintained more than just once a day!

That there are more affordable community facilities in my area Henderson-Massey.

Council buys up some of the land out West before developers get to it so they can secure parks for the increasing population. That more parks and green spaces are forced upon housing developments so the community isn't all heading to the few places and causing a nightmare with crowding.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: With all the multi-story development the rates base must be more favourable to you.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: We already can do the necessary. The train system and its timetables and the days it runs are an open sore for our city.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: we can do it with what we already have.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: BUT without a rates increase.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

In the current financial climate and with all the multi-storey buildings, (and their many Council charges as they are built) we should be able to do the necessary WITHOUT extra cash from an overburdened ratepayer base.

The Upper Harbour Local Board are proposing a new bus service between Paremuremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremuremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why: Seems fair.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why You have the future resources and revenue needed if used carefully.

Also why does WEST AUCKLAND pay weekly rubbish collection rates when much of Auckland DOES NOT!

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

No.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: important.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: important

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Other

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Do not support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

We live in affected area - Bernie Blomfield Property owner at 151 Chamberlain rd, Massey.

We should not be charged extra for residential rates because we have much lower Council service levels ... i.e.

We have no street lighting

No footpaths

No bus serv

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why Yes, I agree with proposals.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: It is vital that Council continues to invest in core services and to avoid falling into an austerity mindset.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: I support this increase as the best option given but do not believe that this level of spending will be sufficient - I support the \$320m package.

Furthermore Auckland Council and its Council Controlled Organisations need to examine the spend on every project through a climate lens. Many existing project need to be stopped. We need to dramatically increase in Aucklanders walking and cycling and investment in our town centres.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: The health of both the Waitemata and Manukau Harbour have decreased drastically over the past century and in recent years. The need for investment in these areas as well as the Tāmaki River is well overdue.

Biodiversity in our water is crucial to supporting all other flora and fauna (as well as endangered species that are living in them). With lots more people moving to and living in Tāmaki Makaurau we need to fund more protection and remediation of our awa.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why: Is this proposing commercializing community facilities by stealth?

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why Support the priorities, with the additional of the Te Atatu Town Centre upgrade.

About 13,000 people live in Te Atatu Peninsula now. An upgrade of our town centre - to make it vibrant and accessible - is long overdue. Waitakere City Council had started the planning work on an upgrade before amalgamation, and it is even more urgent given the impending population boom from the current intensive development enabled by the Unitary Plan. We need to make it easy for people to make the choice to leave their car at home. Protected bike lanes and wide pavements through the town centre will give people proper choice.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Please fund the completion of Te Whau Pathway.

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Waitakere City Rugby & Sports club has been a resident foundation club of the Trust Stadium, Henderson for over 20 years, over that time of serving our community we have struggled to operate as a community club due to the oppressive and commercial first behavior of the Trust management, agreements that we have (Charter K) in particular have not been honored and forced Waitakere CRSC to be operate in a hostile environment, extremely limited access to critical areas in the stadium and rights to the fields have curtailed our ability to forward plan our community engagements with schools, community groups, often falling victim to the Trust stadiums "Bumping" policy which puts their commercial interests ahead of our community activities.

Through our club we are currently serving over 600 rugby members, 200 Tag football & 150 'Boot Camp' members in Waitakere, we have a clear plan to build on our capability to serve all our members but are urgently needing support with accessibility, an additional building that would served as a sports & Hauora marae between our no2 & 3 field, field lighting and new 'Hybrid Turf' field to allow us to operate effectively all year round

What is your opinion on this proposal? Do not support

Tell us why: While everything else goes digital, it is a unique strength of the Auckland Council that it can support community services by and for real people in real places. Services like libraries and Citizens' Advice Bureaus are a vital part of helping everyone access community services.

I am an advocate for digital services where they work for people, but the drive to consolidate and go digital risks excluding people. Play to the strengths of the Council. Invest in communities, and support real people in real places, not just digital.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why: People using a bus service rather than driving benefit everyone in the community. Drivers see less traffic and pedestrians are safer. If anyone should bear targeted rates for transport, it is those of us who drive and park cars, causing traffic jams, carbon emissions, and taking up scarce land.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why Henderson-Massey has a massive need for investment in local infrastructure. The major town centres of Henderson and Massey North are growing, and needs to work better for people who walk, bike, and use transit. Driving walk friendly retail and other activities will help to reduce car trips and improve opportunities in these communities.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

On housing, we need to build more dwellings. This is a crisis. Some of us are sleeping in cars. Others are taking on life-altering levels of debt to buy houses. Teachers struggle to live in areas where we need them.

On Council use of technology, digital information held by Council could be presented in a much more open and reusable way, enabling people in the community to innovate in how they access and present information. Think in terms of APIs,

not just websites and apps. Look at examples in Australia like <https://opencouncildata.org/> or Taiwan <https://taiwantoday.tw/news.php?unit=2,6,10,15,18&post=138968>

Open data would solve some problems with the way information is presented on the Council website. One small example is that searching for a dog park does not offer a list of locations with all the relevant permissions for dogs visible in one view. Open it up and let someone build it.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Whau Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

In the last 7 years our local West Auckland community trusts - Aspire Sports, Health and Education community trust has been working alongside our youth within the Whau local board area to promote and facilitate Hauora and Wellbeing sports and health programs, based at Velonia reserve, we have partnered with the largest youth/adult/masters Tag football club known as the Auckland Metro Tag club, with over 16 teams of predominantly Maori and Pacific players and whanau we have run a 'Not for Profit' program of sports and health initiatives which have drawn the youth in great numbers along with their parents/care givers and whanau who also have benefited from Free 'Boot Camps!', Family days, Tag competitions and Volleyball. The numbers of community members now part of our different programs has created huge pressure as we desperately need a community club facility that would house our equipment and provide a positive focal point for everyone to utilize in a positive way, the Velonia reserve is a perfectly positioned space which has allowed the community to congregate albeit around the toilets and carpark, building on the toilets & changing room block with a club space upstairs would be a major asset for us as well as the local soccer teams, providing safety, a sense of community pride and responsibility to protect and develop the reserve for all our community and for future generations.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: I support the rates increase.

I am concerned about the selling of "surplus property" . With increased housing density , I think that shared green spaces for the community is very important and would not want any parks or land that could be used for parks sold.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

CYCLE LANES IN TE ATATU PENINSULA.

With increased housing and more cars both using the roads and parking on the roads it is becoming increasingly dangerous to cycle around Te Atatu Peninsula. I want more priority given to cyclists and pedestrians . I want a SEPERATED cycle lane all the way down either beach or Te Atatu Rd . SEPERATED and safe enough for kids to cycle not just a painted green strip. I want some roads that access schools like Wharf and Waipani to become one way allowing for one lane of cars, one lane of parking, and one large SEPERATED cycle lane . At the moment , especially around school hours , but also increasingly at other times, driving on Wharf is like a game of chicken. It is not safe to cycle and dangerous for children walking around the school.

My husband cycles to the city every day and once you get near the motorway the cycle lanes are great but getting there is dangerous . And I feel worried about my children biking to school.

It should be made easier to do the right thing . If you are serious about climate change , don't keep making the roads just for cars . Why should they get lanes and parking access both sides while there is nothing for the thousands of kids that want to cycle safely to their local school or park.

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Would be good to educate dog owners about the impact on water quality from dog poos not being picked up (e coli being carried into the waterways). Also regular stream and beach cleanups (not happy with the amount of rubbish in Oratia stream).

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: The community assets are places where memories are created. I have been to several council venues for 21st birthdays, weddings, engagements, anniversaries celebrations. I understand the need for multi-use and online services, especially in the times where social distancing is required. However, there are other solutions like a user-pay system for extra services (e.g. video conferencing facilities at council halls to accommodate non-physical attendees).

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

I don't support the reinstatement of the APTR. As someone who lost her job during the pandemic, having the option to rent out a room on AirBnB has been really good. We're down to one income and we don't know when I will return to work and when the economy

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why: My best friend's parents live in Paremoremo. It was difficult for her to get to school everyday when we were at school. She had to get her parents to pick her up if she had extracurricular activities after school. We are not at school any more but I'm sure there's another school aged kid suffering the same issue right now.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why Can we please have a crossing at Great North Rd and Awaroa Rd? Very dangerous for people to cross the busy Great North Rd after they come off the bus or when they are trying to catch the bus. Since Auckland Transport changed to the spook and wheel model, we've all had to flock to Great North Road to catch buses to town (no express to town from Sunnyvale anymore). Also, it's ridiculous that the crossing at Great North Rd and Hepburn Rd is not connected to the safer footpath (can someone please logic check that footpath?!)

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Infrastructure is important in a growing city like Auckland. We don't want to end up like Texas this year where poor people are left without water and power. I support sustainable infrastructure developments such as subsidised solar panels on new apartment buildings and rainwater tanks for garden and toilets on new properties. I support increased funding and believe that the logic that we're paying for new Aucklanders is flawed. We will ALWAYS pay for new Aucklanders in our rates. We will always be paving the way for the next generation. Don't pull the ladder up from under you. Build stairs so more people can rise after you.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: Huge increase in 3 waters investment - why now ? Will the benefits of this be spread evenly across urban Auckland or just the inner suburbs.

Significant backlog in making our buses more competitive than cars on busy routes - for the economic competitiveness of Auckland this is key (over-emphasis on rail investment which benefits a few)

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: The religious fervour in this area needs to be tempered with economic realities - who will pay? Looking after the economic health of the city is much more important. Those who have the knowledge know that our efforts in this area are minuscule and likely to be ineffectual even with huge investment.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Again the religious fervour in this area needs to be tempered with economic realities. Benefits are unlikely to be unevenly spread across urban Auckland. Do the urgent to deal with urban growth only.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Other

Tell us why: Support but it is important for Council to keep control of key community assets to ensure equitable access

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why Support progressing Te Whau Pathway. Do not support Waitangi at Waititi event, nor reducing carbon footprint. Board should focus on improving the west as a place to live/work/recreate not funding trendy politically correct avenues - do the basics well that's all we ask.

Whau Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right?

Tell us why Support progressing Te Whau Pathway.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Water quality issue is the most important one.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: I don't have time use those community assets, as I'm busy with my full-time job. When I have time during weekend, I normally go to park have a walk. If I need to meet with other people, I can go to churches and other places.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why I don't support Waitākere Outrigger Canoe, as most of people has nothing to do with it. I also don't support Waitangi at Waititi, as during pandemic we need less big gatherings. I think we can invest a new park or walkways around Massey area (west side) which will benefit most of residents.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Walkways are vary import to me, as I spend weekdays working (from home or office) so need somewhere nearby to have relax and exercise. Some areas have lots of walkways but less people, while other areas have few walkways but lots of residents. We need balance as we all pay tax and rates.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: Reasons given are not sufficient enough to warrant extra taxes. This would dampen economic spending in the region as people would have less expenditure to spend in the community instead, forcing spending to be allocated where the council deems most important instead of individuals themselves. Debt is already excessively high for the councils revenue and if the council wasn't already over leveraged at current interest rates I would support the move however, the only action I could support at these debt levels is issuing new debt to refinance historical debt closer to

current interest rates as to reduce the interest expense. If you want to save money and reduce expenses centralize the council and remove local boards, with an average of 1 board per 70,000 residents and the majority of boards spending \$1 million or close to a year on governance costs centralizing the council would save at least \$25 million a year and most likely to lead to less non-essential spending .

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: The only initiative I support is the switching from diesel buses to electric or hydrogen. With hydrogen making the most sense for buses, this is because of the reduced weight with hydrogen vs electric despite been less efficient works best for buses, as they already carry a lot of weight and adding more weight from batteries would reduce travel distance. Hydrogen also has faster recharge times over lithium-ion batteries. However, this doesn't tackle climate change as the required electricity would most likely come from the electric grid, increasing the load and in turn need increased support from carbon producing electricity sources or to build more consistent clean energy sources which would be an additional cost. With regards to planting trees that's great but don't see how this is the governments responsibility to undertake with tax payer money and should be left for the non-profit and charity to undertake with donations allowing individuals to decide if this is important to them with their money not tax payer money. New Zealand as a whole is also responsible for less than 1% of global CO2 emissions and even if we reduced our output to 0 would not be enough to make any meaningful difference. A better cost free approach from government would been providing incentives for property developers to take more sustainable and green approaches through tax breaks or subsidies as opposed to using tax payer money to fund council projects.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: This is what rates and local taxes are suppose to be for local infrastructure costs with support from debt to fund short term costs over the long run. I'm more concerned why this essential infrastructure need hasn't been meet with the current council revenue and debt accumulation which in turn makes me reluctant to support further taxes.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or

rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Other

Tell us why: If council expenses are exceeding what is available then complete divestment in facilities should be made to reduce costs. If certain facilities are necessary for a community the free market will provide them at an acceptable cost to the community and the primary responsibility of the government should be to provide adequate infrastructure such as roads, railways, water management, electricity grid, etc to support community growth.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: If there is a demand and a need for this service then it could be provided and made profitable by the fee charged for the service. If there is not a demand such that this service would be profitable and therefore requires tax payer support to be made possible then it is not worth having. It is unfair to ask people who may neither want nor have a need for such a service. The question I would ask is why does the Upper Harbour Local Board deem this service important and why it is necessary to be provided by local tax payers. The free market is the best system for resource allocation for goods and services based on demand.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why This what i was referring to in regards to local boards and unnecessary spending if the council is struggling to provide key infrastructure such as water quality and so called "much needed investment" that all Aucklanders benefit from so much so that the council requires more money. Then these local climate change initiatives and funding of Waitākere Outrigger Canoe club and Waitangi at Waititi events are unnecessary and a waste of tax-payer money. I would prefer this money go to higher priority projects like water quality infrastructure in the first place instead of paying more.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

I would like the Auckland council to be more centralized and take more control of city districts and remove local boards instead city planning and spending be planned and undertaken solely by the council itself as it elected to do. This will serve to make the government more efficient making decisions with consideration for all Aucklanders instead of just the local district and would reduce wasteful spending allowing the council to better plan and spend its money. This could be achieved through a regional referendum if people would like this change to be implemented. A better cost free approach from government would been providing incentives for property developers to take more sustainable and green approaches through tax breaks or subsidies as opposed to using tax payer money to fund council projects.

Important privacy information

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your local board: Henderson-Massey

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: I would like to support this, however understand that there will already people and families struggling and 5% (even though it's a one off) might really make it tougher. If the one off rates increase does occur, I would hope that this money is spent fairly across the ENTIRE Auckland region, rather than just select pockets.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Please also support electric commuter trains being able to go past the Swanson station and through the tunnels.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: Water quality in and round Auckland and New Zealand is vital to our environment.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Maintaining and upgrading the assets we already have is extremely important in ALL areas of Auckland.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Weed control is imperative. It's astounding to me that noxious weeds are left to just grow rampant in our urban areas. Wild ginger, moth plants etc. It's disappointing.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: Why should rate payers, pay additional for a new bus service when our public transport system in Auckland isn't ideal?

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

I feel that while housing and growth is incredibly important, so is maintaining and keeping our green spaces. Why can't we have a great mix of mixed-housing, while maintaining our beautiful trees. Pretty disappointing to witness the sheer amount of property development happening around Auckland where existing houses are demolished to make way for huge developments. Then there are the beautiful native trees that were just chopped down in Canal Road, Avondale. On one hand, there's this huge push to protect Kauri and prevent Kauri Die-back; yet other trees are cut down to make way for houses. Seems a little contradictory. We can do better than this can't we?

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: In order to meet climate goals, Auckland Council needs to dramatically increase the numbers of Aucklanders walking and cycling, by providing safe infrastructure. This includes: 1. Allocating more funding for safe, separated cycleways and innovative streets projects for quicker and more economical delivery 2. Increasing funding to Auckland Transport and require it to count people on bikes, rather than random kilometres of cycleway across the city. 3. Ensuring bigger budgets are available for local boards and residents to ask for and achieve more low-cost tactical urbanism projects...

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why Bike Te Atatu has been calling for the upgrade of Te Atatu Peninsula for many years. As our population is set to explode this work is now urgent. We request that board undertakes urgent planning with the aim of revitalising our 'village' centre by making it rider and pedestrian friendly. This should include: 1. a separated cycleway through the main street (both sides of the road). 2. Low Traffic Neighbourhoods - these can be trialed as a first step. 3. Separated cycle paths along all 50 km/h roads (including current bus route) 4. Create right of way priority at intersections for bikes and pedestrians. 5. Additional and improved crossings on 50 km/h roads. 6. Ample bike parking in town centre and at the proposed Public Transport Hub. The benefits of these changes are that they will support: 1. A bustling township with a village atmosphere. 2. Safe local streets where children play and people young and old, walk freely. 3. Independent children who ride or walk locally to school, friends' and practice. 4. Great parks and waterways connected with a safe network of paths and streets. 5. A diverse community of people who know their neighbours and look out for one another. 6. A relaxed, healthy neighbourhood that defies the stresses of the city and enjoys the small things in life. 7. Reduced carbon emissions

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

1. Bike Te Atatu requests funding for town centre upgrades, as part of a meeting Council's climate (and wider) goals. 2. Bike Te Atatu requests that the governing body fully fund the completion of Te Whau Pathway. \$35.3 million has already been provided by the government, which will complete the pathway in Te Atatu, however the full benefits of the project

will not be met until it can link the two harbours. Te Whau Pathway has a cost/benefit of 3 to 1. If it is not completed the cost/benefit will be 1.6 to 1, representing poor value for money spent. By including the project, Auckland Council and Auckland Transport may be eligible for Waka Kotahi NZTA funding of \$16.68 million (51% subsidy), meaning that Council could complete the project for an investment of \$16.03 million. Te Whau Pathway is aligned with these outcomes in the LTP: More people using public transport. More people walking and cycling in the city. Less people dying or getting injured on our roads. Less flooding and improved water quality in waterways, particularly after storms. Community infrastructure that meets the needs of a growing and increasingly diverse population. A range of recreation options that Aucklanders can choose from to stay active. More visitors to Auckland. More quality jobs in local areas.

A range of events and experiences across Auckland. Our natural environment protected from human generated and natural hazards (e.g., kauri dieback). Aucklanders receive greater value from council services. Completion of Te Whau Pathway is supported by the Henderson-Massey and Whau Local Boards. Bike Te Atatu has been calling for the upgrade of Te Atatu Peninsula for many years. As our population is set to explode this work is now urgent. We request that board undertakes urgent planning with the aim of revitalising our 'village' centre by making it rider and pedestrian friendly. This should include: 1. a separated cycleway through the main street (both sides of the road). 2. Low Traffic Neighbourhoods - these can be trialed as a first step. 3. Separated cycle paths along all 50 km/h roads (including current bus route) 4. Create right of way priority at intersections for bikes and pedestrians. 5. Additional and improved crossings on 50 km/h roads. 6. Ample bike parking in town centre and at the proposed Public Transport Hub. The benefits of these changes are that they will support: 1. A bustling township with a village atmosphere. 2. Safe local streets where children play and people young and old, walk freely. 3. Independent children who ride or walk locally to school, friends' and practice. 4. Great parks and waterways connected with a safe network of paths and streets. 5. A diverse community of people who know their neighbours and look out for one another. 6. A relaxed, healthy neighbourhood that defies the stresses of the city and enjoys the small things in life. 7. Reduced carbon emissions

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: NO!! I just got my first home in February 2021. I do not feel that the pressure of paying more rates should be thrust up on me as I have already struggled a lot for getting into the housing market in the first place. You need to tax the rich and home owners prior 2021. Also, what's happening with the regional fuel tax money? Skypath is on hold, light rail is on hold and I do not see any new major projects getting signed off.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: I support this initiative but again council cannot expect a first home buyer struggling in this housing crisis to pay more. Find other alternatives.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: Allow for a progressive and/or tabled rate payer increase format. I am in support of all the initiatives but I cannot afford to pay more rates. Find alternative measures. Do not break the middle class by taxing them more

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why: Investment has to be made in communities which need the most and not just Pahika community

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why: Not local to Paremoremo

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why Priorities align with my principles

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at aucklandcouncil.govt.nz/privacy and at our libraries and service centres) and with the Privacy Act 1993. 10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Support divestment of underperforming assets.

Play a greater leadership role in addressing digital divide and consider impact on vulnerable communities of moving services online.

Support removal of library fines.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Support removal of library fines

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why Continue Panuku programme to address issues with town centre

Address antisocial behaviour in the town centre

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Support removal of library fines.

This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: I would like to see local projects proceed and the maintenance and upgrade of local facilities such as West Wave.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: I would also like investment into trains to Huapai to reduce car congestion on our roads.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: I want my local Opanuku stream to be swimmable

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why: I don't support community facilities being closed. Once community assets are lost, it's near impossible to get them back.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

Support reinstatement of Accommodation Provider Targeted Rate

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

I want to see more requirements for high density developments to make them accessible. The most important issue for me is accessibility. I'd like to see pedestrian friendly footpaths and cycleways. Maintenance of lifts and ramps. I'd like to see design allocation for services such as waste and for access of emergency services. On my street on rubbish day there are so many wheelie bins I can't get by safely with my pram. I've also seen at brand new apartments that ambulances and fire trucks can't get access.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: The faster Auckland recovers the better it will be for Aucklanders

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: I support planting native trees and switching to more environmentally friendly buses but we desperately need to work on public transport, (especially making it faster and more reliable!) and if diesel buses are cheaper and would allow us to put more on the road I'd want that option.

If we can actually meet the needs of people to encourage them to use public transport (such as buses earlier and to factory zones for those employees. We can decrease car use significantly which would have a greater environmental effect in my opinion

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Public transport.

Our current system is too slow, and unreliable.

To use the train to get to work in the CBD I have to pay only a small amount less than I do for driving in and parking (about \$5 less per day), and it takes an extra 20 minutes per trip on a good day. It can take an extra 40 minutes on bad

days. Trains should be taking a relatively uninterrupted route and really should be able to reach the same destination faster than my car stuck in moderate to heavy traffic on the motorway.

They also do not service the large population of factory workers, who are needing to get to work early in the morning (5 or 6 am). There are simply no buses first thing in the morning, and sometimes no buses to certain industrial sites such as The Concourse in Henderson. You could make a significant impact on car use by just providing early morning services and afternoon services starting from 1 or 2 pm, in these areas.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

I have grave concerns over roading.

My work is on the road and it has become strangled due to housing development racing ahead with no new roads.

The reality is we need more roads (including motorways) to cater for an exploding Auckland. I support sustainability but we are going backwards fast.

Generously sized roads and motorways built now can be the eco transit lanes of the future ie trains, electric, cycles etc.

New subdivisions have narrow roads with no parking. Contractors with diggers and the like can hardly access the areas

Large houses of today have no where to park on the road because of the bay parking concept and planted swales taking place of parking.

These will be an environmental issue as council will not maintain these swales and will become weedy. Therefore will look untidy or be pressured to use more herbicides.

Auckland is like a tree getting bigger and bigger, but the ties around that tree have not been changed and the tree is being strangulated.

Lincoln Road is one of the worst roads in Auckland and nothing has been done for decades

Speed humps belong in side streets. They should not be in main roads. Edmonton Road, Te Atatu has a new speed hump and trucks and to basically stop to transverse it. This is crazy and while the kids safey is paramount use pedestrian traffic lights, do not slow traffic.

Roads , roads, roads.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: NZ has a cap+trade ETS. Any further investment beyond those which produce a positive Net Present Value simply discounts the emissions of others.

Cycling and other active transport should be prioritised - these low cost initiatives provide positive NPV's and big improvements in amenity:

1. More safe, separated cycleways and innovative streets projects - quick / economical delivery.
2. Require Auckland Transport to count people on bikes, rather than kilometres of cycleway.
3. Deliver more low-cost tactical urbanism projects, as well as safer speeds and low-traffic neighbourhoods.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: The general increase in rates and the targeted environment and water quality rates is not enough to deliver the outcomes needed.

The environment targeted rate needs to be increased to the level identified previously to stop the degradation of our ecology.

The deferral of local capital programmes should not be included. It will impact significantly and inequitably, more than cutting programmes in other areas of the regional budget and therefore should be maintained.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: We support for increased and speedy investment and work in climate change actions working with the community.

In particular we support investment in greenways and local active mode links as alternatives to roading projects.

Council should develop a specific fund to create more community led local links.

Projects that could attract central government funding need to be included in the LTP to enable that investment like Te Whau Pathway.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: We support the water quality rate increase but request increased investment in community led activities.

Council should increase focus on supporting growth of community support organisations that support local community initiatives.

Community Waitakere look forward to working closely on this area with community and council.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: We support increased investment in community services.

Any changes to delivery of community services and facilities need to work with the local communities through the local boards to ensure equitable and supportive change.

Council needs to proactively seek opportunities to support māori and pacific community facilities and initiatives noting that these facilities serve the broader community

CW look forward to working closely on this area with community and council.

We are concerned about food security and request Council identify funding to increase community supply and to resource food networks and initiatives.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why We support HMLB progressing actions in the Waitākere ki Tua Action Plan and lift Māori participation in local decision-making

We support investigating options for Te Rangi Hiroa Reserve nursery site, with a focus on community-led sustainability and food initiatives. We support the development of a social enterprise that provides more eco-sourced plants for restoration and street trees, increased food security and access to rongoa and access to meaningful work experiences for those in need of additional support.

We support progressing initiatives such as street tree planting and develop a community-led climate action plan to lower Henderson-Massey's carbon footprint.

We propose that HMLB consider renaming and slightly expanding the scope of the current Project Twin Streams line item to enable the programme to include community restoration initiatives in Te Atatu Peninsula and Massey.

Upper Harbour Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why We particularly support the implementation of your Greenways Plan. These provide additional resilience to communities as well as support active lifestyles and community connection.

We support progressing the Upper Harbour Local Board Urban Ngahere (Forest) Strategy and working with community organisations to build capacity, community connection and access to external funding.

We support initiatives that build local resilience and support community connections.

Whau Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why We support all of the Whau local board's priorities.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

We support increased investment in areas facing growth particularly in addressing adequate provision of green space and impacts of intensification on stormwater and transport.

We are concerned that Council and government infrastructure, work programme planning and funding is not responding to massive change in our western neighbourhoods which are facing significant growth in population and demand on infrastructure.

We do not support deferral or loss of local capital projects funding.

We do support reinstatement of local transport capital funding including those funds lost by local boards who were holding funds for major initiatives. The Te Whau Pathway should be included in the Auckland Council's Long Term Plan (LTP) 2021-2031 and Auckland Transport's Regional Land Transport Plan (RLTP) 2021-2031.

No funding is required until 2024-2027, since \$35.3 million has already been provided by the government. By including the project, Auckland Council and Auckland Transport may be eligible for Waka Kotahi NZTA funding of \$16.68 million (51% subsidy), meaning that Council could complete the project for an investment of \$16.03 million.

Te Whau Pathway is aligned with these outcomes in the LTP:

- More people using public transport.
- More people walking and cycling in the city.

- Less people dying or getting injured on our roads.
- Less flooding and improved water quality in waterways, particularly after storms.
- Community infrastructure that meets the needs of a growing and increasingly diverse population.
- A range of recreation options that Aucklanders can choose from to stay active.
- More visitors to Auckland.
- More quality jobs in local areas.
- A range of events and experiences across Auckland.
- Our natural environment protected from human generated and natural hazards (e.g., kauri dieback).
- Aucklanders receive greater value from council services.

Te Whau Pathway has a cost/benefit of 3 to 1. If it is not completed the cost/benefit will be 1.6 to 1, representing poor value for money spent.

Completion of Te Whau Pathway is supported by the Henderson-Massey and Whau Local Boards.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Just as council has taken a revenue hit so has the general public/ rate payers have taken a hit on incomes / biz revenue. So it needs to be continued at the current level of 3.5% as its an unsettling time & people need to be get back to normal lives before trying to fleece them at this difficult time.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: No change to current plans (alternative 2)

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: we need to check & see the improvements in water quality happening from 2018-2021 reports so next year we can plan on extending the targeted till after 2028. The current 10 year is a good time frame to get things done, so extension should be considered only in 2026/27.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Rates increase needs to be deferred, increasing it now is not the right time. People are happy to continue with current levels of service & are understanding that improvements are delayed due to covid-19 challenges.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Do not support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why: Any additional route is part of AT network & should be run as a service not targeting extra rates to run a bus service. The revenue should come from the user not from people who don't use the bus. AT needs to look at running smaller buses (18-20 seater) that service areas around (1-10km radius) residential areas so people can get to a transport hub & catch the bus/train.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why None of these are urgent services needed at a time of recovery from covid-19 challenges. It all applies & useful when things get back to normal & borders reopened & tourists are able to come.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

No change to current plans (alternative 2)

Important privacy information

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Important to keep key services operating - as long as there is a process for those struggling financially to be supported. Really keen to see the WhWhau shared pathway completed.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: We need to make urgent changes to address the climate emergency

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Stop people profiting off selling water and make sure clean water is available to us all, in its many forms.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why: Mixed on this - centralizing services often impacts those most in need. how will you make sure the under-represented communities do not suffer?

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 2 – targeted rate of \$153 for each separate dwelling or business on a property for properties located in the wider Paremoremo and Lucas Heights area of the Upper Harbour Local Board

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Please refer to rating comments further below.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

We do NOT support the higher urban rate proposed for our property. We do NOT receive the same level of services as other properties inside the urban rating area. 1. We do NOT have a footpath on our side of the road, instead we have ditches that we have

The Upper Harbour Local Board are proposing a new bus service between Paremuremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

1. Council have done a great job so far for upgrading the Royal Reserve playground and amenities around NorthWest.
2. However, it's about time we have another pool in West Auckland. Our area is expanding at a fast rate and West Wave is no longer suitable for the population. We shouldn't have to travel further afield to use other pools.
3. Stop housing developments going ahead that don't offer any driveways/parking. Don't assume everyone can easily use public transport and don't require a car.

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Do not support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Do not support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Do not support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Don't know

Tell us why: It's a good plan, but how does it affect us, teenagers?

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: I support this because it's changing public transport into a new light, and planting trees are good, but why don't we buy acres of land with trees, instead of waiting for the trees to grow to then collect carbon from the atmosphere.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: All for it, just how you're doing it?

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

With the Electrification of the Papakura-Pukekohe train line, I would like to see stronger consideration given to using the diesel units being used currently on that line and will be mothballed, used to service Huapai to Swanson. There have been upgrades made to the rail North and a platform is already in place at Huapai. This would be achievable at very little cost to the Council/AT. It would work towards the "Climate Policy" reducing the use of petrol vehicles on the road and would reduce the congestion between Kumeu and Massey during peak travel times.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Please focus on creating more homes that are affordable under the first home buyers scheme in the West. Increase the rates if need be as I understand this is essential to have what we need but there is much focus for housing in central and the deep south which are way too far for the commute.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: As I work for the council I am reassured they are clear on what they need to achieve to recover from Covid-19, I also believe they have the best intentions for the community as a whole.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: I think it is the way forward - the difference between the air quality in Queen St and Swanson is very very clear to me, the impact that lockdown had visibly showed what we are doing to our environment, we must change and do it quickly. We recently upgrade to a hybrid car and in 5 years will get an electric one, we have just put solar panels in thanks to solarzero and we are excited as to the possibilities.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: The importance of exceptional Water quality can not be underestimated, over everything, food transport the key essential to life is water. We must treat this as the precious resource it is, respect and enhance it.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: I see the need for a more diverse approach to these services, we need to support the ability of the community to access all the resources it needs to thrive including diverse locations, programmes, books and online. I support the closure of some facilities to increase the value in others, ideally situated beside public transport hubs. I also see a clear need for understanding in the community of the benefit of having these services and that they need to take advantage of them for the benefit of themselves, their families and their communities.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why: This doesn't affect my family or I.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

Tell us why I don't believe they have looked at the needs in the community. These seem like vanity projects which aren't going to benefit the majority of the community. Their focus should be on retaining industry in Henderson to grow local jobs/careers, investing in education and traditional sports such as rugby and netball which offer our sports-oriented kids opportunities on the international stage. As well as investing in local hubs such as the Ranui Action Project, Vision West, affordable housing such as a share ownership plan, these are far more important than a new swim centre or a Waka Ama team. I also believe there needs to be more focus on literacy, building strong support networks for parents and young children.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Let's slow growth and focus on the people who are here now. Grow thriving local communities, families and individuals, put money into local events, support artists and creatives.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: I believe it is best to continue to support existing and proposed initiatives as it will cost more in the long run if they are not maintained or started now.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: The actions listed do not go far enough. There are cost effective ways to respond to our climate change obligations such as utilising the road renewals budget and directing AT to focus efforts on increasing mode-share. Accelerating active-mode initiatives can help take more cars off the road which reduces the need for increased spending on roads.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: It is critical for communities that there are easily accessible (close proximity) community facilities. If consolidation / amalgamation of resources is to go ahead, provisions should be made to ensure surrounding suburbs have sufficient access and support to reach those services.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Sounds like a good investment

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Climate Change is a bad thing and should be dealt with rather than just talking about it

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Also seems a good idea

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why: Not entirely sure on this investment

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why Any further development of the Massey and Henderson area to become a more residential area as opposed to an industrial one is a good development. Though I'd rather that the local wildlife is doing better than it is now.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

I think caring for the environment is a good idea and should be developed upon.

Important privacy information

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: We must invest in core services and ensure we do not go down the path of austerity measures that has been seen to fail and have negative impacts on the poorest in our society.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: I support this increase as the best option given but don't think this is enough to reach our vision of a zero carbon economy. There needs to be more of an emphasis on realigning the existing budget to shift spending towards climate action and away from carbon emissions. Auckland Council and its Council Controlled Organisations need to examine the spending they have locked in for the future and analyse the effects these have on climate change emissions. Building more carbon intensive infrastructure, such as Mill Road, will lead to an increase in car dependency.

We need to focus more on reducing the number of vehicles on the road. Whilst E vehicles are good they are also vehicles that take up space from other modes. We need to replicate the success of the Northern Busway on other corridors- and do it quickly. Take lanes from vehicle use and dedicate them to low emission PT and walking and cycling - giving a real alternative.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: I support the extension and the increase. The health of both the Waitemata and Manukau Harbour have decreased drastically over the past century and in recent years. The need for investment in these areas as well as the Tāmaki River is well overdue.

Biodiversity in our water is crucial to supporting all other flora and fauna (as well as endangered species that are living in them). With lots more people moving to and living in Tāmaki Makaurau we need to fund more protection and remediation of our awa

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Local Boards should have the final say on facilities in their area and the support they require.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why Henderson Massey (and the Whau) Local boards and the council must prioritise Te Whau pathway. The pathway will provide a walking and cycling link to the population from Te Atatu to Green Bay to Public Transport within a short bike ride or walk.

Henderson - Massey must come up with a Te Atatu Peninsula town centre plan. The area is getting a lot of intensification and the centre must be ready for this. The town centre plan should meet goals around healthy, active communities and climate change. Ensure the town centre is somewhere to walk, ride and linger - not a drive through.

Henderson Massey LB should work to ensure the proposed Te Atatu, Lincoln Rd bus interchanges on SH 16 are designed to support and encourage walking and cycling to them - again not becoming auto dependant.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

We need to ensure we are working towards a climate friendly low carbon society. This means intensification of our city - building up rather than out. We must ensure this intensification is supported by quick, efficient and affordable PT and walking and cycling modes- we will need to take lanes to achieve this rather than traffic enducing road widening.

Strategic assets are just that- dont sell off the city today as we cannot afford to buy back new libraries and park space when it has gone.

What is your opinion on the proposed 10-year budget?

Don't know

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Obviously we need to be investing in climate change prevention measures immediately (before now, really, but you can't change the past). Alternative one would be even better! However, the proposed areas of investment seem like they are missing any strong change or leadership that might really turn things around, as opposed to trying to stop things from getting too much worse. Transport emissions are a huge part of our climate problem, and yet the only transport emissions reductions here are shifts to electric vehicles. The climate investments should also be looking at shifts *out* of vehicles; and as part of that, changes that make vehicles less necessary e.g. increasing housing density, making cycling safer and easier...

We need major change, and we need it yesterday. I'm disappointed to see that even the 10 year plan is talking mostly about minor changes. Please, Auckland Council, show some leadership here!

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Water infrastructure in this city has been woefully under-invested in by past councils, which means we now have to invest more heavily. The money has to come from somewhere!

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why: This kind of change isn't something I think you can make sweeping statements about. There are probably places where reducing facilities that aren't fit for purpose is a good idea; but not everybody has good digital access and making more services digital can increase the societal have/have-not gap. It's important that community assets and services are not assessed on a one-size-fits-all kind of policy, and that good information is used about who is using the services/assets in order to make decisions about what is needed in our communities.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why I like the proposed climate action plans, but the budget for "environmental services" doesn't seem to match the priority of climate-related initiatives? Funding to finish the Te Whau pathway is an obvious win in my mind, and I specifically hope this can be arranged.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

The most important issues for me are climate change, and the connections between it and transport, and between climate change and community-building proposals. I would like to see some more future-oriented planning for how we can change the way Aucklanders live and get around, rather than just hoping that if we electrify some vehicles all our

problems will be magically solved. For example, I'd like to see investment in active and public transport infrastructure prioritised over road infrastructure; and investment in good local services and denser inner-suburb housing so that people don't need to travel so far for their basic services. I'm not seeing the kind of forward-thinking change in the 10 year plan that I'd like to be seeing. Please, Auckland Council, take some bolder steps towards a greener future for our city!

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: We need to keep improving infrastructure.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: I will support only because it's a one-off increase. I don't want to see delays on some of the projects due.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Don't know

Tell us why: I don't feel Auckland is invested in make climate change a real priority.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: I was told by someone living in Housing NZ that they've don't pay for water. Water should be capped for number of people living in housing and if water consumption is more than they should pay.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Support this but I don't see that funds going into projects benefit everyone in the individual communities.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Do not support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Support

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: We absolutely CANNOT be applying austerity measures during this time. Our future and long-term wellbeing as a city is at stake if we do not put in this critical investment. These works will make life better for everyone, with value well beyond the average \$200 or so extra to pay for one year.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Please do the right thing and protect future generations. I believe we should be doing all we can to prevent climate change. I would even support additional investment in this area to ensure we are doing our part to meet required targets.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Water investment is critical to the health of our water and the living creatures that live on, under or around our waterways. Hapua Thrive gathered 1,000 signatures from people who wanted to see the Council make water health a priority. We are suffering because of a lack of investment in our infrastructure and from organisations trying to put this off. We need works to start in 2022.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Making sure community facilities meet the needs of the local community is key. No two suburbs in Auckland are the same and we should be guided by the community in improving or creating new spaces.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Ōrākei Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why

What is your opinion on the Glen Innes Business Association boundary expansion into our area? Don't know

Tell us why

Puketāpapa Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

With the housing and growth infrastructure, I would like to see strong transport links and facilities be considered in developing special housing areas. Developments like Stonefields have poor transport links and I think it creates more cost and challenges in the long term.

Important privacy information

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: I agree that investment needs to be made in infrastructure and support for core council services (Rubbish, Roads etc.) . Over time Council has placed an increased focus on non core areas (Arts and Entertainment) while important not all are essential . Given current economic times I would prefer to stick to core business and the rates increase wont be required. Increased rates is going to hurt a lot of people.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: In my view Council is jumping the gun moving to new technology that has not been proven. Electric batteries disposal is not supported, mining is not green. Hydrogen is not proven or at a stage to be rolled out. Are we tipping money out to follow an unproven fad? Central City Cycle ways have their use, but I am seeing other cycle ways that don't lead to a main transport route. I work late and it is dark and need to be on site (no working from home), there is no way I will be cycling at night to get home and to catch a bus there is not direct route. You need to do more to sell it to me. The glamour story seems to be presented without looking at facts. Education needs to continue and can be done with out the additional spend.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Don't know

Tell us why: Current advertising on water saving is too passive, previous water shortages water from washing machines would be diverted to a bucket. Every think is plumbed in now.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Keep the facilities and lease them out to others, don't sell the asset.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Other
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Other
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Community centres and Libraries need to have a more strategic purpose, one example as an enabler, as entry level for start up businesses.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why Some of these are individual projects that don't have a wider community interest. Other funding sources should be tapped in to.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

An interim review of Unitary Plan. Urban development in Te Atatu Peninsula needs to have an over arching urban plan that has a vision for the area, and what it could be, not just accepting what is happening. High density apartments with no character.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Because our rates keep going significantly each year and we have had taxes put on our fuel for roading. You just keep making the poor poorer in this city. Don't prioritise the skypath over the harbour bridge. There is a huge saving right there!!!! Put a stop to that now. Can't believe there was no coordination on that one. Stop all walkways and cycleways and projects that aren't critical to keeping our traffic moving until jobs related to this are sorted called prioritising and budgeting

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: What is the plan for handling the batteries in landfills

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: I am not convinced allocated funds will benefit my property. Wording of this proposal is too vague. I have only received this budget proposal on 17th March. There has not been enough time to read it and respond fully. How will this affect my rural property in Whenuapai in the near future to warrant the rates we pay? Every rate increase that we have had to endure has not improved our situation at all! In fact traffic is worse, we still have a septic tank, and poor internet supply. No pathways or cycleways. We have a motorway next to us and massive commercial buildings ruining

our lifestyle. Do we wait 10 years to sell or develop? Further it seems there are thousands of new property holders in Hobsonville and other areas around us. Surely the addition to all that extra tax revenue should accommodate these needs instead of burdening us further with rates increases. This is our family home and we are being compromised beyond tolerance!

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Council needs to continue to invest in core services and avoid austerity at all costs.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: I clicked support as the best option but am worried this level of spending isn't sufficient to get to a zero carbon economy. As much as possible, the existing budget needs to be shifted towards climate action and away from carbon emissions. This also needs to apply to spending already locked in for the future. Avoid building more carbon intensive infrastructure (eg Mill Rd, Penlink) will lead to more car dependency.

Please prioritise zero emissions buses, active transport, tree planting.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

I am totally happy for a rates increase - rates improve the way we live for all Aucklanders, and if we want better services with a much better climate outcome then we need to get behind it financially as well as theoretically.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Moving Rural, Single house zoned property without water, wastewater services, footpaths or transport into the Urban area.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Do not support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Objection to inclusion of the property into the Urban area as proposed. Not if it increases power charges to residents.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Submission emailed supporting this feedback. Object strongly to including my property at 225 Red Hills Rd. within the Urban boundary.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at aucklandcouncil.govt.nz/privacy and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

SUBMISSION TO AUCKLAND COUNCIL

Proposed changes to the Urban Rating Area

This property is zoned Rural Residential, single house zone, and proposed to be moved within the "Urban" boundary according to Auckland Council letter dated 22 February.

The property has no services : tank water supply, septic tank, no footpaths, no transport services, unchanged since 2014.

The 2014 valuation was \$1.1m based on the property as a single house rural block. Between the 2014 and 2017 Valuations, no change was made to the zoning, Rating was retained as Rural Residential, and the property value increased to \$4,950.00.

Because of personal and family health issues at the time of the 2017 Valuation, I did not object to the Valuation in the time allowed. I subsequently emailed Council and was informed that the property could not be subdivided until services were provided to the property, and Council regarded it as 'future urban'.

(Email 19.8.2020 from Council). "In general subdivision and development in the Red Hills Precinct should not occur in advance of the availability of reticulated public wastewater, water supply and transport infrastructure including the wider transport network".

Therefore the "highest and best use of the land" as required by Council, remained as a single residence lifestyle block and nothing more. To say a \$4,950 valuation was nowhere near the market value in 2017, or now for that matter, would be an understatement.

Appraisal and estimated value by Wallace and Stretton dated 12 March 2021 contains the following commentary:

"The current CV price level appears over valued due to the land loss areas that could not be utilised for development, i.e. covenanted bush areas that are unlikely to be able to be removed.

The access to the site is very limited and could more than likely only be developed with the entry being via the neighbouring properties. It will be difficult to obtain Council consent to gain access from 225 Red Hills Road.

When appraising properties for sale we provide pricing of comparative properties on the market. We are unable to supply any comparative or current sales of land which can be used to compare your property due to the contours and the loss of building area on the block.

There is no water reticulation, wastewater services or footpaths.

*We estimate the value of. **Massey to be from \$2,950 to \$3,200.00**, this pricing being based on the square metres of land available for actual building sites in the future."*

2.

The property is useful only as a lifestyle block and on its own, as advised by a Fletcher Building representative, would not be suitable even as a land bank unless the adjoining properties either side were included.

No Provision of Services:

At the time of my email to Council of July 2020 re provision of services, the projection was for 8 to 12 years in the future and reliant on the provision of the Northern Interceptor by 2025.

However there is no provision in the 10 year Budget for provision of services to this area of Red Hills Road.

Red Hills Precinct Objectives:

I610.2. Objectives

(1) Subdivision and development is undertaken in a coordinated manner that implements the Redhills Precinct: Precinct Plan 1 through emphasising the character of place and aiding legibility by the creation of focal points and nodes.

(2) Subdivision and development achieves a well-connected, adaptable, safe, attractive, healthy and pleasant environment for living and working with an emphasis on the importance of access to the public realm including parks, roads and the natural environment.

(3) Subdivision and development is coordinated with the delivery of bulk infrastructure required to service the precinct and its effects on the wider network, including transport, wastewater and water services.

(4) Subdivision and development does not occur in advance of the availability of reticulated public wastewater and water supply services and transport infrastructure, including the wider transport network.

I cannot continue to pay exorbitant rates on a rural lifestyle property which has none of the urban area services, nor is it close to them, and cannot be subdivided in the foreseeable future. Nor is it desirable as a land bank, with no developer interest.

I was not informed of a North West Growth Strategy Council Consultation on Red Hills which closed on 15 February for feedback.

On 22nd February I received a letter advising that Council proposed realigning the existing rural boundary with the urban boundary, and my property at : would be inside the urban area, with a subsequent increase in rates which would be completely unaffordable.

The rationale given by Council in the letter of 22 February that this is to “capture areas where urban development is occurring or can occur and properties in these areas have similar levels of access to council services as nearby properties inside the Urban Rating Area” is completely erroneous.

Council letter of 22nd February advises that I am able to object to the valuation in November 2021, but intends introducing the new Urban boundary including the property in July 2021!

I object strongly to the property being included inside the Urban boundary when Council cannot provide me with any indication for provision of all services required for urban subdivision as a basis for development or sale.

3.

Otherwise, the property remains a single house, rural lifestyle block and must be valued accordingly. On that basis I will be objecting to the revaluation in November 2021 regardless.

This appears to be no more than extortionate rating on seriously overvalued land currently, and a proposed urban zoning which is neither credible nor quantifiable.

I would however be pleased to offer the property to Council for housing at the current valuation of \$5m or near offer.

It should not be the responsibility of a property owner to provide Council with a registered valuation of the property in order to prove its value, but in this case, even the current QV valuation and rating basis is seriously over inflated.

Any move to 'urbanise' rural, single dwelling, unserviced and unsubdividable property needs to be legally challenged if pursued.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: The ignoring of essential infrastructure, stormwater, sewage, and spending vast amounts on non essential cycle paths, airport trains, and road closures will kill the city get real ger going.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Climate change will have detrimental effects for all of us.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: We are supportive of actions that are environmentally friendly and that improve the environment. To this end, our club has installed a wastewater/stormwater filtration system for our boat yard.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Do not support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

THERE IS NO HOUSING STRATEGIC PLANNING. JUST HOUSING NO ONE CAN AFFORD. HEAVEN HELP US. IF WE GO BACK TO MORTGAGE rates of 17 - 22%, I lived through those??

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Don't know

Tell us why: 因为我沒有房产。 I do not have property

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Don't know

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: 目前的地税已经很高了 the current rate is high already

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: 不是基本的解决方法 it is not the sustainable way to solve the problem

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: 只有奥克兰需要缴纳水费 only Aucklanders need to pay water bill

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Do not support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Don't Know

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Sounds like a good way to combat global warming

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Don't Know

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Don't Know

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: I think I support a lot of the things. But i don't really know about the impacts that these decisions will make. Will planting all those trees take away farmland? Will the price of all this be not worth the cost? As we are struggling in NZ already with debt can we even afford to go under even more debt? Will making electrical buses use those rare resources?

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: I like both ideas from the information provided on this page. But if I could only choose one option it would be the extension option I think. I don't have a super strong opinion on this subject but I do know that having clean beaches and streams and lakes would be amazing.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: Although updated places would be cool, I think there are other more important options that funds should go towards. I think we as NZ can be fine with what we have now in the way of parks, playgrounds and such.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't Know

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Over my years in Auckland.. Climate has been a massive factor in terms of building our country back, and building it better. The proposed increased investment will definitely help out with the climate issues, and will ensure us Aucklanders are doing our bit. ?

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Beaches, and harbours are a great way to keep Auckland maintained with tourism. This is what attracts them, in some cases.. But I think we should really be focusing on Western Springs.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: I think this is awesome! This is what we need, for sure!!

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Don't know

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Because it's an increasing issue

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Because it's beneficial for the community

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Because it's there for younger generations not just for the now

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at aucklandcouncil.govt.nz/privacy and at our libraries and service centres) and with the Privacy Act 1993. You should familiarise yourself with this policy before submitting this form.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: In our society today's climate change isn't among the biggest problems so I believe that this would be a good idea

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: I believe that climate change is a massive issue not only affecting New Zealand but also affecting the world. I believe that the actions that are being proposed are excellent ways to reduce greenhouse gas emissions and respond to climate change. Therefore, I support the increased investment in reducing climate change.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: ldk

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Because

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Because

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: I believe that it is a smart and attainable plan, unless the deadlines aren't met, which could backtrack the whole plan. I do think the new bus system is a little bit far-fetched in terms of the new buses being electric or hydrogen powered by 2021, because it's such a big change in such a small time, but I definitely think that all of this should be done

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Don't know

Tell us why: This part of the proposal doesn't make much sense to me, but I think that a key focus should be making sure that all areas have access to clean water, no matter if they're rural or urban areas.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why: I think that sports already have enough investment, and more arts aspects of the community like theatres and music related schools should be funded. The arts are constantly overlooked, which discourages people to participate, but creating more local theatres would create more of a sense of community where multiple people of different ages could all meet and have fun doing what they love. There could also be more dance studios, because dance is also overlooked. Money should be rather spent on the performing arts rather than sports.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Don't Know

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Protecting NZ and making sure we can do the most we can to protect this amazing land and its eco system is very important so I think this is a good idea and should be good.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: I think it is a good idea to support and help water qualities, but if we're going to construct more things in Parnell or major constructions it might not be the best.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: I support the proposed increased investment, because I find that Climate affects nearly every aspect of our lives, from our food sources to our transport infrastructure, from what clothes we wear, to where we go on holiday. It has a huge effect on our livelihoods, our health, and our future.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Don't Know

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: We are already facing the consequences of decades of under investment in infrastructure in the Te Atatu Peninsula, Henderson, Massey areas and experience frequent sewage overflows into our Awa [Henderson Creek]. In addition, right now there is a sharp rise in housing density which will put further pressure on infrastructure. Not investing in infrastructure improvements such as the waste water network and storm water networks will be very negative for our community and the well being of our whanau.

The population growth in the north-western region of Auckland City has placed intense strain on infrastructure. Wastewater from Westgate, Whenuapai, Hobsonville Point, Hobsonville, West Harbour and parts of Massey all pass under our awa (Henderson Creek) and flow along the coastal strip from Renata Esplanade, through Taipari Strand and again under the awa to The Concourse Detention Tank. Frequent overflows have occurred in this aged section of the transmission line. Essential Capital expenditure on such infrastructure should be prioritized under the Recovery Budget.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: We are already years behind where we should be in addressing climate change and we are seeing evidence of the increasing impact of climate change. Pausing now could have a big impact on our futures. We must increase our efforts to address climate change, not reduce.

Section 7.2 of the Supporting Information supplement to the 10-Year Budget 2021 – 2031 proposes three options for climate action:

1. Moderately accelerate climate action
2. Significantly accelerate climate action
3. Status Quo (do nothing)

Option 1 costs of about \$15m would be accommodated in the proposed overall 5% general 21/22 rates increase. An Option 1 Plus costs of about \$45m would require an uplift of the general 21/22 rates increase to 5.9%. Option 3 does not require any change in the general rate. Option 1 is preferred by Auckland Council.

Option 1 appears to provide only for planning and response to natural hazards. An Option 1 plus provides for physical protective works and a pilot study on 4 critical coastal landfills. The supporting document does not provide detail for a full Option 2.

The Rivercare group would support Option 1 Plus as this would help in avoiding sea water inundation of the Taipari Strand closed landfill and its subsequent effect on Te Wai O Pareira (Henderson Creek).

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: We support the extension and increase in investment in Water Quality on the proviso that there is increased investment in the water quality for Te Wai o Pareira, [Henderson Creek]. This waterway has suffered decades of abuse with frequent sewage overflows which need addressing urgently. The targeted rate MUST be spent to benefit the community that has paid for it.

The Supporting Information supplement identifies the size and scope of the wastewater network. It identifies wastewater overflows from the network as a major issue and these overflows have significantly impacted Te Wai o Pareira, [Henderson Creek]. The proposed water quality targeted rate extension specifically includes Hobson Bay to St Heliers and the Manukau Harbour but makes no mention of the upper Waitemata Harbour. This targeted rate should be applied equally to addressing water quality issues across the whole of the region.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

What is your opinion on the proposed 10-year budget?

Other

Tell us why: [see attachment for full report]

QUESTION 1 - Proposed Recovery Budget:

Auckland Council has a track-record of supporting the arts. We encourage Council to continue to invest boldly in the arts and cultural sector. The sector has been hit hard by Covid-19, and has a vital role to play in the city's recovery from the pandemic. We therefore urge council to maintain pre-Emergency Budget funding levels as a minimum.

The Recovery Budget refers to three recovery objectives: community, economy and jobs. The arts and cultural sector makes a substantial contribution to outcomes in these three areas.

We support Council's commitment to Māori outcomes, from marae development through to Te Reo revitalisation, as well as an increasing incorporation of Māori design principles in urban development.

We acknowledge the value of Council's six goals in its Toi Whitiki: Auckland's Arts & Culture Strategic Action Plan policy document. We encourage council to hold this document at the core of its decision-making about the city's arts and culture.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

What is your opinion on this proposal? Other

Tell us why: [see attachment for full report]

QUESTION 4 - Community Investment:

We note that Council's Recovery Budget acknowledges the city's changing needs particularly in the context of its increasing diversity. It is through the arts, that communities learn about different cultures. A study by Creative NZ (2020)* revealed that 69% of Aucklanders say they learn about different cultures through the arts.

Community Facilities:

We recognise the challenge council faces, owning a wide range of community facilities, many of which require considerable maintenance and investment to make them fit for purpose. We wish to comment on Council's proposal to diversify its delivery mechanisms for services to the community, including partnerships digital channels and multi-use facilities. Corban Estate Arts Centre is itself founded on a community partnership model, so we know this can work providing accessibility and affordability are key principles in facility agreements. We also know that Te Manawa in North West is demonstrating that a multi-use facility can deliver positive outcomes to the community, and in the case of arts and culture, can meet grassroots needs.

We have some concerns about the delivery of community services (including arts and culture) through digital channels. Our concern is primarily around equity. This has been highlighted recently when the country has aimed to deliver educational services to its students when schools have been closed during the Covid-19 lockdowns. It has been reported that students from poorer homes were clearly disadvantaged by the dependence on digital education channels. While some communities may want more digital service delivery, others such as those in poorer areas are likely to be increasingly disadvantaged. Considerable community consultation is needed here.

Recent Creative New Zealand (CNZ) research* found that 66% of Aucklanders agree that major arts facilities are important to create a vibrant place to live.

We stress the importance of Kanohi ki te kanohi (face to face) engagement is critical in an increasingly digitally oriented world, to deliver wellbeing outcomes such as social cohesion, connection and understanding. Kanohi ki te kanohi engagement is significant for many communities, particularly for Maori and Pasifika. Council owned facilities provide this opportunity, and we would be concerned about a reduction of community/arts and cultural spaces.

With the intensification of residential development in our local area of Henderson, including high density housing, the need for recreational, leisure and arts and cultural spaces becomes more vital.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? Other

Tell us why [see attachment for full report]

QUESTION 6 — Local Boards

We commend our local board, the Henderson Massey Local Board for being one of the local boards that makes specific reference to arts and culture in their 2021/22 priorities.

Regarding any proposed changes to delivery of community facilities and services, it will be important that Local Boards engage directly and comprehensively with their communities. In the case of arts and culture, consultation will need to be within the context of Council's Toi Whiti*ki*: Auckland's Arts & Culture Strategic Action Plan policy document.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at aucklandcouncil.govt.nz/privacy and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

SUBMISSION TO AUCKLAND COUNCIL

SUBJECT: Feedback on Auckland Council's 10-Year Recovery Budget

FROM: Waitakere Arts & Cultural Development Trust (Corban Estate Arts Centre)

[Contact: Martin Sutcliffe - Director, Corban Estate Arts Centre martin@ceac.org.nz 021 130 3496]

KEY POINTS:

We recognise and acknowledge the financial pressure Auckland Council is under as a result of Covid-19. However we stand to represent the essential role arts, culture and creativity play in supporting individual and community wellbeing and community cohesiveness in our diverse communities, as well as the role of the arts in making Auckland a desirable place to live and visit.

The arts and cultural sector is a complex ecology made up of individual arts practitioners and arts organisations; from artists who represent Aotearoa on the world stage, right through to those giving form to their irrepressible creativity at a grassroots level. The arts and culture of Auckland is rich and diverse; giving expression to voices from a multitude of cultural, ethnic and socio-economic backgrounds, which is essential for Auckland to be a thriving multi-cultural city.

Arts and culture serve to bring communities together and is a significant catalyst in community building. Corban Estate Arts Centre is a multi-arts facility that not only supports the arts sector and its participants, but also provides services which support social and wellbeing outcomes, including those from some of our less advantaged communities.

QUESTION 1 - Proposed Recovery Budget:

Auckland Council has a track-record of supporting the arts. We encourage Council to continue to invest boldly in the arts and cultural sector. The sector has been hit hard by Covid-19, and has a vital role to play in the city's recovery from the pandemic. We therefore urge council to maintain pre-Emergency Budget funding levels as a minimum.

The Recovery Budget refers to three recovery objectives: community, economy and jobs. The arts and cultural sector makes a substantial contribution to outcomes in these three areas.

We support Council's commitment to Māori outcomes, from marae development through to Te Reo revitalisation, as well as an increasing incorporation of Māori design principles in urban development.

We acknowledge the value of Council's six goals in its Toi Whītiki: Auckland's Arts & Culture Strategic Action Plan policy document. We encourage council to hold this document at the core of its decision-making about the city's arts and culture.

QUESTION 4 - Community Investment:

We note that Council's Recovery Budget acknowledges the city's changing needs particularly in the context of its increasing diversity. It is through the arts, that communities learn about different cultures. A study by Creative NZ (2020)* revealed that 69% of Aucklanders say they learn about different cultures through the arts.

Community Facilities:

We recognise the challenge council faces, owning a wide range of community facilities, many of which require considerable maintenance and investment to make them fit for purpose. We wish to comment on Council's proposal to diversify its delivery mechanisms for services to the community, including partnerships digital channels and multi-use facilities. Corban Estate Arts Centre is itself founded on a community partnership model, so we know this can work providing accessibility and affordability are key principles in facility agreements. We also know that Te Manawa in North West is demonstrating that a multi-use facility can deliver positive outcomes to the community, and in the case of arts and culture, can meet grassroots needs.

We have some concerns about the delivery of community services (including arts and culture) through digital channels. Our concern is primarily around equity. This has been highlighted recently when the country has aimed to deliver educational services to its students when schools have been closed during the Covid-19 lockdowns. It has been reported that students from poorer homes were clearly disadvantaged by the dependence on digital education channels. While some communities may want more digital service delivery, others such as those in poorer areas are likely to be increasingly disadvantaged. Considerable community consultation is needed here.

Recent Creative New Zealand (CNZ) research* found that 66% of Aucklanders agree that major arts facilities are important to create a vibrant place to live.

We stress the importance of kanohi ki te kanohi (face to face) engagement is critical in an increasingly digitally oriented world, to deliver wellbeing outcomes such as social cohesion, connection and understanding. Kanohi ki te kanohi engagement is significant for many communities, particularly for Māori and Pasifika. Council owned facilities provide this opportunity, and we would be concerned about a reduction of community/arts and cultural spaces.

With the intensification of residential development in our local area of Henderson, including high density housing, the need for recreational, leisure and arts and cultural spaces becomes more vital.

QUESTION 6 – Local Boards

We commend our local board, the Henderson Massey Local Board for being one of the local boards that makes specific reference to arts and culture in their 2021/22 priorities.

Regarding any proposed changes to delivery of community facilities and services, it will be important that Local Boards engage directly and comprehensively with their communities. In the case of arts and culture, consultation will need to be within the context of Council's Toi Whītiki: Auckland's Arts & Culture Strategic Action Plan policy document.

CONCLUSION

We urge Council to continue to support and develop ways for Aucklanders to engage with and participate in the arts over the next 10 years. Arts and culture have an essential role to play in the wellbeing of Māori, Pasifika and the diverse communities of Auckland, as well as in promoting social cohesion between the many communities that call Auckland home.

NOTE: *From CNZ's research document – New Zealanders and the Arts: Ko Aotearoa me ōna toi (2020)

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why: Absolutely vital. A catchup for all the neglected years.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: With current weather patterns and other events, flood, earthquakes, etc. We must do our part and make progress.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why: Can't neglect doing the right thing. A must for future generations and infrastructure.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Good for the welfare of people, especially for those on low incomes. Also for the elderly and refugee groups.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

NOT CONFIDENT ENOUGH TO COMMENT ON THIS.

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

HOUSING MOST IMPORTANT, ESPECIALLY FOR 1ST HOME BUYERS AND THOSE ON LOW INCOMES. PLEASED WITH PROGRESS ON INFRASTRUCTURE, ESPECIALLY PUBLIC TRANSPORT.

Important privacy information

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: [see attachment for full report]

Our overall feedback is that we support the need to continue with Council's capital investment of \$31 billion over the next 10 years and recognise that Council is projected to have its revenue impacted by around \$1 billion as a result of COVID-19.

However, we believe Auckland Council should only be servicing core business and not social spending which is the role of Central Government.

Recovery regarding the impact of COVID-19

We have ongoing concerns expressed from local SME's that COVID-19 continues to have a detrimental impact on their businesses.

The impacts include direct financial impacts on businesses (especially hospitality businesses), supply chain and market disruption. The short-notice lockdowns and subsequent impact on immediate loss of business has been torturous.

COVID-19 has had major influences on exporters and those relying on international visitors and students. For hospitality and event organisers, the ongoing lockdowns have been devastating. Many firms relying on imported goods are also being affected by interruptions in supply chains, particularly in manufacturing. Small and medium-sized businesses have had their business models turned upside down. Businesses tied to travel, tourism and hospitality have experienced losses that will not be recoverable. We still do not know how long this will continue. We have lost many businesses already, with the outlook for some businesses now being dire.

In addition, many employees are now working from home for several days of the week, which is severely affecting our day time hospitality and retail spend.

Our West Auckland businesses have felt the economic brunt of four lockdowns so far. Although we did see some positive rebounding last year, there has been a gradual erosion of consumer confidence which is affecting spend. The uncertainty for businesses on navigating rolling lockdowns, supply chain issues and the lack of international visitors have made trading conditions extremely difficult.

Our overall feedback is that what businesses need most from Council is a fair, transparent and stable approach to rates. As we said above, we do not accept the need for a 5% rates increase.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Other

Tell us why: [see attachment for full report]

With regard to the proposal to extend the Water Quality Targeted Rate until June 2031, we agree that Auckland must improve infrastructure to save our harbours, beaches and streams from being polluted by overflows from ageing sewerage and stormwater systems. Inaction will cause reputational damage to the city. While CPHBA is supportive of transparently 'ring fencing' spending on this kind of infrastructure and an extension until June 2031, we do not accept that a business differential (even at 25.8%) should be applied to this targeted rate. We accept that business should pay a share, but not a differential.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Other

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

SUMMISSION ON:

THE 10-YEAR BUDGET 2021-2031 'RECOVERY BUDGET'

The Central Park Henderson Business Association Inc. (CPHBA) offers our Submission to Auckland Council's long term consultation.

Our Submission covers:

- A. Lincoln Road Upgrade
- B. The Proposed 10 Year Budget
- C. The impact of COVID-19
- D. Rating Policy Proposals

With regard to Transport - LINCOLN ROAD

'\$3,695m CAPEX OVER 3 YEARS'

'With no additional funding we would be able to:

However there would be a \$400 million reduction in transport capital investment over the next three years compared to pre-COVID projections. This would mean:

- minimal investment in projects in local board areas, further extensions, and Park and Ride facilities.
- no investment in roading projects such as Glenvar, Lincoln and Lake roads
- no further investment in the ongoing walking and cycling programme'

\$4,245m CAPEX OVER 3 YEARS

With proposed additional funding of \$550m we could also:

> Of interest to West Auckland

- \$550M of proposed additional funding for the first three years enabling:

Increased investment in local board areas, along with a number of other projects

- One being Progress Lincoln Road (LR)

CPHBA support the additional CAPEX over 3 years as these funds will be used upgrade Lincoln Road, which is overdue.

Recommendation:

if 'extra funding' is not approved we recommend the following

'No Right Turn signs' onto Lincoln Rd from

- Paramount Drive
- Daytona Road
- Soljan Drive

These are dangerous manoeuvre's at any time, but on peak these actions endanger other drivers.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

As we enter another very uncertain year, especially for small and medium sized businesses, we ask Auckland Council to carefully consider their needs in its approach to the Recovery Budget 2021/2031 and provide more focus on growing the economy and supporting job creation.

These are dangerous manoeuvre's at any time, but on peak these actions endanger other drivers.

Proposed 10 Year Budget

Our overall feedback is that we support the need to continue with Council's capital investment of \$31 billion over the next 10 years and recognise that Council is projected to have its revenue impacted by around \$1 billion as a result of COVID-19.

However, we believe Auckland Council should only be servicing core business and not social spending which is the role of Central Government.

Recovery regarding the impact of COVID-19

We have ongoing concerns expressed from local SME's that COVID-19 continues to have a detrimental impact on their businesses.

The impacts include direct financial impacts on businesses (especially hospitality businesses), supply chain and market disruption. The short-notice lockdowns and subsequent impact on immediate loss of business has been torturous.

COVID-19 has had major influences on exporters and those relying on international visitors and students. For hospitality and event organisers, the ongoing lockdowns have been devastating. Many firms relying on imported goods are also being affected by interruptions in supply chains, particularly in manufacturing. Small and medium-sized businesses have had their business models turned upside down. Businesses tied to travel, tourism and hospitality have experienced losses that will not be recoverable. We still do not know how long this will continue. We have lost many businesses already, with the outlook for some businesses now being dire.

In addition, many employees are now working from home for several days of the week, which is severely affecting our day time hospitality and retail spend.

Our West Auckland businesses have felt the economic brunt of four lockdowns so far. Although we did see some positive rebounding last year, there has been a gradual erosion of consumer confidence which is affecting spend. The uncertainty for businesses on navigating rolling lockdowns, supply chain issues and the lack of international visitors have made trading conditions extremely difficult.

Rating Policy Proposals

Our overall feedback is that what businesses need most from Council is a fair, transparent and stable approach to rates. As we said above, we do not accept the need for a 5% rates increase.

Business differential

While we appreciate that the business differential is being reduced through the Recovery Budget 2021/2031, fundamentally, we do not accept that a business differential should be applied to rates especially for reasons that "businesses are better able to manage additional costs than residential properties" or because "businesses can claim back GST and expense rates against tax." These reasons do not justify the business differential, particularly for small businesses who make up most businesses in Auckland.

Rating Policy

With regard to the proposal to extend the Water Quality Targeted Rate until June 2031, we agree that Auckland must improve infrastructure to save our harbours, beaches and streams from being polluted by overflows from ageing sewerage and stormwater systems. Inaction will cause reputational damage to the city.

While CPHBA is supportive of transparently 'ring fencing' spending on this kind of infrastructure and an extension until June 2031, we do not accept that a business differential (even at 25.8%) should be applied to this targeted rate. We accept that business should pay a share, but not a differential.

On the proposal to extend the Natural Environment Targeted Rate until June 2031, we agree that Auckland must reverse the decline of biodiversity in the region, stop kauri dieback and address the spread of pests, weeds and diseases. However, we believe that these matters are more properly the responsibility of central government or taxpayers.

Auckland Council should seek increased funding from Central Government because all New Zealand benefits from increased tourism and our international clean green branding. Auckland ratepayers should not be the first direct source of funding for projects which have a wider benefit than just the Auckland region. Again, while we are supportive of transparently 'ring fencing' this spending and an extension until June 2031, we do not accept that a business differential (even at 25.8%) should be applied.

Conclusions

As we enter another very uncertain year, especially for small and medium sized businesses, we ask Auckland Council to carefully consider their needs in its approach to the Recovery Budget 2021/2031 and provide more focus on growing the economy and supporting job creation.

Yours sincerely,

The Central Park Henderson Business Association Inc.

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Difficult to take rate increase as the ideal plan in response is tax reduction.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: Anything to do with climate change, I support.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Don't know

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

I agree

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

No comment for now.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Don't know

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Don't know

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal?

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Don't know
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Don't know

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Do not support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why: I only support some part of this proposal

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: The investment on electric bus are the right direction

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Other

Tell us why: Council should work on breaking the monopoly on water supply and start to increase the competition by allowing public bidding.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: I fully support this proposal

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Council should focus on living spaces and transportation

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why: not worth. very badly traffic around and take too long time on the road. I will not using public transport.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: families are experiencing hard times and we donot want to pay more rates.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: I support environmental protection as our next generations will benefit from it

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why: I accept the extension

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why: I donot support Council to spend more money on these projects at this stage under COVID-19

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Support
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

This is not urgent matter

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support most priorities

Tell us why The most important thing for Council is to improve it's people's welfare

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

No

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control	Do not support
Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service	Support
Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service	Don't know
Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre	Support
Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services	Support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why: Those who lives and do business near the bus station will get the convenience and benefit.

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Other

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension only

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Do not support

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: Can not afford as live cost goes up more than 20% to 30% already.

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Do not support increased investment

Tell us why:

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: Cannot afford

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Don't know

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Do not support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Do not support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Do not support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Do not support

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

No

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support any priorities

Tell us why

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Don't know

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Do not support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

Yes

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I do not support most priorities

10-year budget 2021/2031

Proposed Recovery Budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost saving and sell more surplus property.

Note: *this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.*

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Tell us why:

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Other

Tell us why: I want an ambitious investment in a better future for our city. Not enough is being set aside for climate change projects. Less than 0.5% of the budget is not enough. I would like to see councillors get behind the more ambitious option that was originally proposed.

Transport is our biggest source of climate pollution. There needs to be far more encouragement for people to take public transport as that also decreases congestion from single-occupant cars. More bus lanes, bus priority at intersections, and an across-the-board reduction in fares are needed. Raising fares for commuters because of a reduced take during COVID is a disincentive to taking public transport. Raising parking charges in the city could be used to benefit public transport by making it more expensive to drive and park in the city. The HOP card works really well by integrating public transport but it is expensive at \$10 per person when you are purchasing 4 HOP cards or more for a family.

There needs to be less invested in roads and more investment in cycleways, public transport, and footpaths.

I am pleased that we are planting more street trees. However, they will take years to mitigate carbon emissions to any extent. There needs to be general tree protection brought back to to preserve our canopy trees on private property and public land. The climate cannot wait for newly planted trees to make a difference especially when we are chopping down 100 year old native trees, as in Canal Road.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Support the extension and the increase

Tell us why:

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal?

Tell us why:

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service

Do you have any comments on any of our proposed changes to rates and fees charges?

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Support Option 1 – targeted rate of \$238 for each separate dwelling or business on a property for properties located within 500m walking distance of a proposed bus stop

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

6. Local Boards

Henderson-Massey Local Board

Tell us your thoughts on our proposed priorities for the local board area in 2021/2022 and our key advocacy initiatives – have we got it right? I support all priorities

Tell us why I support 1) Te Rangi Hiroa nursery site. I also support developing a community-led Climate Action Plan. But \$273,000 for environmental services will not be enough. I enjoy walking/running in local parks. These would benefit with more native tree planting and therefore less mown grass. Sherwood Park and Marlene Glade could be improved with groups of native trees and more weed control of moth plant, tree privet, and wattles.

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

Important privacy information

Your feedback

1. Proposed 10-year budget

Our proposed 10-year budget would see capital investment of \$31 billion in Auckland over the next 10 years. This would allow us to deliver key services Aucklanders rely on, renew our aging assets, have a focused approach to building infrastructure to support population growth, and make progress on addressing the challenges of climate change and environmental sustainability.

As a result of COVID-19, it is projected that our revenue will be impacted by around \$1 billion. In light of this, and to provide the investment outlined above, we are proposing a one-off 5 per cent average general rates increase for 2021/2022, rather than the previously planned 3.5 per cent increase. The increases would return to 3.5 per cent each year thereafter. We are also proposing to increase our borrowing in the short term, continue to make cost savings and sell more surplus property.

Without this greater use of rates and debt, around \$900 million of much needed investment in Auckland would be delayed from the next three years to later in the decade. This would slow Auckland's recovery, put our services and assets at risk, lose hundreds of millions of dollars in matching government subsidies, and limit our response to our climate and environmental challenges.

What is your opinion on the proposed 10-year budget?

Do not support

Tell us why: The rates are already expensive enough

2. Climate change

Through Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan, we heard Aucklanders want greater action on climate change. The proposed 10-year budget includes additional investment to respond to the challenges of climate change.

The proposed additional investment will mean we do not need to buy any more diesel buses and it will help us replace our diesel buses with electric and hydrogen buses sooner. It will also help us divert more waste from landfill, plant over 2 million more native trees and other initiatives.

What is your opinion on this proposal to invest more in responding to climate change?

Support the proposed increased investment

Tell us why: We need to take responsibility for climate change and put our energy into the environment.

3. Water quality

Since 2018 the Water Quality Targeted Rate has allowed us to fund initiatives to improve the water quality of our harbours, beaches and streams. This was initially intended to run from 2018 to 2028.

We are proposing to extend the Water Quality Targeted Rate until June 2031.

Extending the targeted rate

Extending this targeted rate to June 2031 will help continue to improve water quality in other areas of the city, including coastal water quality from Hobson Bay to St Heliers, as well as the Manukau Harbour. Extending this targeted rate would enable this additional work to begin in 2028/2029.

Increasing the targeted rate

To start construction on the above major new water quality projects six years earlier (in 2022/2023), and to increase our investment in regional water quality programmes across all of Auckland, we are also proposing to increase this targeted rate annually in line with proposed average increases in general rates.

What is your view on this proposal? Do not support either change

Tell us why: It's not a matter of the water quality itself, it's a problem with the water pipes and infrastructure.

4. Community investment

We have hundreds of community assets like libraries, halls, community centres, community houses, arts venues and assets in our parks that are getting older and some are in urgent need of repair. The cost of operating, repairing or rebuilding these assets over the next 10 years could leave no money for anything new or upgraded. To maintain our current assets and upgrade or provide new assets, rates would likely need to be increased over time.

We propose a new approach for community services, such as leasing or shared facilities, that does not rely as much on us building and maintaining physical assets. This will reduce our carbon footprint and lower our costs by partnering with others to deliver services and deliver more community services online.

Over time, we propose to consolidate the number of our community facilities and services (which may result in some facilities being closed) and instead focus on multi-use facilities and online services to provide for our diverse communities.

What is your opinion on this proposal? Support

Tell us why: Banks and insurance companies are slowly disappearing. Everyone is shifting to online services but we still generally need translation services.

5. Rating policy

The following are some of our proposed changes to the way we charge rates on properties. These changes affect each property differently. They may, or may not, affect your property.

Extending the Natural Environment Targeted Rate until June 2031 to invest further in measures such as addressing the spread of kauri dieback, and predator and weed control Do not support

Extending the Urban Rating Area so land that has an operative urban zoning, or which has resource consent to be developed for urban use now (except for Warkworth), pays the same urban rates as nearby properties that have access to a similar level of service Support

Charging farm and lifestyle properties in the Urban Rating Area residential rates so they pay the same urban rates as nearby properties have access to a similar level of service Support

Extending the City Centre Targeted Rate until June 2031 to maintain our investment in upgrading the city centre Do not support

Introducing the Rodney Drainage Targeted Rate on the land in Te Arai and Okahukura that benefits from the stormwater services Don't know

We are proposing other changes to rates and fees, including the introduction of the Electricity Network Resilience Targeted Rate on Vector to fund council's tree management programme around the Vector overhead power lines and options to reinstate the Accommodation Provider Targeted Rate.

Do you have any comments on any of our proposed changes to rates and fees charges?

Solving Kauri dieback disease, weeds, pest and predator control planned until June 2021: I do not support these priorities. I support the urban rating zone and the farm and lifestyle block urban rating policies. I do not support the extension of the city

The Upper Harbour Local Board are proposing a new bus service between Paremoremo and Albany, funded by a targeted rate.

Which option do you support?

Do not support either option

Tell us why:

Do you live in the area affected by the proposed Upper Harbour Local Board transport targeted rate?

Yes

7. What is important to you?

Do you have feedback on any other issues, including our proposals on housing and growth infrastructure or strategic assets?

More than anything, Auckland as well as New Zealand in general has very poor and inferior public transport. We do have to expand public transport in order to address climate change, but with this current system, the suburban areas though more understandable why they fall short, the metropolitan area has no chance at achieving desired outcomes around public transport. This is not only a commuting problem, but public transportation in this country, which has a large portion as a tourist destination, is too poor compared to other advanced countries such as those in Europe. We recommend that you benchmark the bus lanes like Seoul or Sejong City in Korea. Compared to subways and trains, it is very efficient in terms of infrastructure investment costs. Please refer to it and reflect it in your infrastructure investment.
